**Quarterly Meeting of the Administration Committee
of the Board of Trustees of the
State Universities Retirement System
Thursday, June 6, 2024, 12:00 p.m.
Northern Trust – 50 S. LaSalle St. – Chicago, IL
Global Conference Center
*Optional Remote Connection for Members of the Public***

This meeting was held in-person at Northern Trust, 50 S. LaSalle St., Chicago, IL.

The following trustees were present: Dr. Andriy Bodnaruk, Dr. Fred Giertz (via Zoom), Mr. Scott Hendrie, Mr. John Lyons, Dr. Steven Rock, Mr. Collin Van Meter, and Mr. Mitch Vogel.

Others present: Ms. Suzanne Mayer, Executive Director; Mr. Michael Schlachter, Chief Investment Officer (CIO); Ms. Tara Myers, Chief Financial Officer; Ms. Bianca Green, General Counsel; Ms. Nichole Hemming, Chief Human Resources Officer; Ms. Jessica Pickens, Sr. Investment Officers; Mr. Albert Lee, Associate General Counsel; Ms. Heather Kimmons, Associate Legal Counsel; Ms. Anna Dempsey, Investment Counsel; Ms. Stephanie Jeffries, Mr. Al Lund, and Mr. Darian Saracevic, Investment Analysts; Ms. Kristen Houch, Director of Legislative and Stakeholder Relations; Mr. Jefferey Saiger, Chief Technology Officer; Ms. Kelly Carson, Ms. Chelsea McCarty and Ms. Annette Ackerman, Executive Assistants; Mr. Michael Calabrese of Foley, Mr. Bryce Haws, Ms. Erica Oropeza of Linea, Mr. Brian Murphy, Ms. Amy Williams, Ms. Kristen Brundirks, and Mr. Kevin Noelke of GRS.

Administrative Committee roll call attendance was taken. Trustee Flaherty, absent; Trustee Rock present; Trustee Van Meter, present; Trustee Vasquez absent.

Trustee Van Meter appointed Trustee Kothari as an Ad Hoc member of the Administrative Committee for the June 6, 2024, meeting. Trustee Kothari was present at the meeting.

Trustee Flaherty joined the meeting via zoom at 2:00 p.m.

Trustee Vasquez joined the meeting via zoom at 2:05 p.m.

MOTION TO ALLOW TRUSTEES TO PARTICIPATE VIA ELECTRONIC MEANS

Trustee Van Meter opened the meeting by asking for a motion to allow specific trustees to participate remotely .

Trustee Rock made the following motion:

- That Trustee Vasquez and Trustee Flaherty be allowed to participate via video or conference call for the Administration Committee Meeting on June 6, 2024, pursuant to Section 7(a) of the Open Meetings Act.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

APPROVAL OF MINUTES

Trustee Van Meter presented the minutes from the Administration Committee meeting of March 1, 2024.

Trustee Rock made the following motion:

- That the minutes from the March 1, 2024, Administration Committee meeting be approved as presented.

Trustee Kothari seconded the motion with all trustees voting in favor.

CHAIRPERSON'S REPORT

Trustee Van Meter did not have a formal chairperson's report.

QUARTERLY PENSION SYSTEM UPDATE

Mr. Jefferey Saiger presented an update on Project Velocity, the SURS pension administration system (PAS) project and he introduced Ms. Erica Oropeza and Mr. Bryce Haws of Linea Solutions to share additional details. Ms. Oropeza provided the status of the project by discussing the validation and results of testing cycle 2, the sprint schedule, and project strategies moving forward. Vendors and SURS will continue to work collaboratively to keep the project on track and moving forward.

A copy of the staff memorandum and a copy of the Linea presentation are incorporated as part of these minutes as [Exhibit 1](#) and [Exhibit 2](#).

FISCAL YEAR 2025 ADMINISTRATIVE EXPENSE & CAPITAL EXPENDITURE BUDGET/FISCAL YEAR 2025 INVESTMENT DEPARTMENT BUDGET

Ms. Tara Myers presented the proposed Administrative Expense and Capital Budget for Fiscal Year 2025 and the Investment Department Administration Expense Budget.

After the detailed presentation, Trustee Van Meter asked for a motion for the FY 2025 Administrative Expense and Capital Expenditure Budget and the Investment FY 2025 Budget.

Trustee Rock made the following motion:

- That the FY 2025 Administrative Expense Budget be approved as presented.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

Trustee Rock then made the following motion:

- That the FY 2025 Capital Expenditure Budget be approved as presented.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

Next, Trustee Rock made the following motion:

- That the Investment Department Administrative Expense Budget for FY 2025 be approved as presented.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

Trustee Rock made the following motion:

- That the projected Investment Department Investment Management Fees for FY 2025 be accepted as presented.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

A copy of the SURS memorandum titled “Administrative Expenses and Capital Budget – FY 2025,” the staff presentations titled “SURS FY25 Administrative and Capital Budget Presentation” and “SURS FY25 Investment Operation Budget” are incorporated as part of these minutes as [Exhibit 3](#), [Exhibit 4](#) and [Exhibit 5](#).

FISCAL YEAR 2021-2024 EXPERIENCE STUDY

Ms. Myers presented the FY 2020 – 2024 actuarial experience study SURS is statutorily required to have performed. The GRS team provided a comprehensive overview of the experience study.

Trustee Rock made the following motion:

- That based on staff recommendation, the June 30, 2020 - June 30, 2023, actuarial experience study report be received as presented.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

Trustee Rock made the following motion:

- That based on the GRS and staff recommendation, the economic assumption changes be approved as presented:
 - * The Price Inflation assumption be increased from 2.25 percent to 2.40 percent effective for the valuation period as of June 30, 2024.
 - * The Investment Return assumption remains the same at 6.5 percent.
 - * The assumed future Effective Rate of Interest (for valuation purposes) be increased from 6.5 percent to 7.0 percent effective for the valuation period as of June 30, 2024.
 - * The Base Salary Increase/Payroll Growth rate be increased from 3.0 percent to 3.15 percent effective for the evaluation period as of June 30, 2024.

*The COLA for Tier II be increased from 1.125 percent to 1.20 percent effective for the valuation period as of June 30, 2024.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor of the same.

Trustee Rock then made the following motion:

- That based on the GRS and staff recommendation, the demographic assumption changes be approved as presented and become effective for the valuation period as of June 30, 2024, and become effective for the Money Purchase Factors (annuitization rate under Rule 2) and other actuarial tables no earlier than July 2, 2025.

Trustee Kothari seconded the motion which passed via all trustees present voting in favor.

Copies of the “2024 Experience Study – Draft,” “SURS 2024 Experience Study – Final,” and the SURS memorandum titled “Actuarial Experience Study Report” are incorporated as part of these minutes as [Exhibit 6](#), [Exhibit 7](#) and [Exhibit 8](#).

Retirement Savings Plan DISABILITY STUDY

Ms. Myers presented the Retirement Savings Plan “RSP” Disability study. Mr. Kevin Noelke of GRS provided a thorough overview of the study.

Trustee Rock made the following motion:

- That based on the GRS and staff recommendation, SURS maintain the current RSP disability contribution rate of 0%.

Trustee Kotari seconded the motion which passed via all trustees present voting in favor of the same.

A copy of the SURS memorandum titled “Retirement Savings Plan Disability Study Report” and the “GRS Review of RSP Disability Experience Letter” are incorporated as part of these minutes as [Exhibit 9](#) and [Exhibit 10](#).

ACTUARIAL CONSULTING SERVICES RFP

Ms. Myers noted the contract with GRS will expire at the end of this year and SURS will be issuing a new Request for Proposals for Actuarial Consulting Services. Finalists will be presented to the board during at the September or October meeting.

CLOSED SESSION

Trustee Van Meter asked for a motion to go into closed session for the review of the employment and performance of the Chief Investment Officer and Executive Director.

Trustee Rock moved that the Administrative Committee go into closed session pursuant to §2(c)(1) of the Illinois Open Meetings Act to review the employment and performance of the chief investment officer and executive director.

Trustee Kothari seconded the motion which passed via the following roll call vote:

Trustee Flaherty	-	aye
Trustee Rock	-	aye
Trustee Van Meter	-	aye
Trustee Vasquez	-	aye
Trustee Kothari	-	aye

RETURN TO OPEN SESSION

The Administrative Committee returned to open session at 3:45 p.m.

Trustee Rock made the following motion:

- That the chief investment officer's salary be increased in the manner consistent with SURS' process for employees with less than one year of service, beginning with the pay period that includes July 1, 2024.

Trustee Kothari seconded the motion which passed via the following roll call vote:

Trustee Flaherty	-	aye
Trustee Rock	-	aye
Trustee Van Meter	-	aye
Trustee Vasquez	-	aye
Trustee Kothari	-	aye

Trustee Rock made the following motion:

- That the executive director's salary be increased at the percentage assigned to her performance rating, beginning with the pay period that includes July 1, 2024.

Trustee Kothari seconded the motion which passed via the following roll call vote:

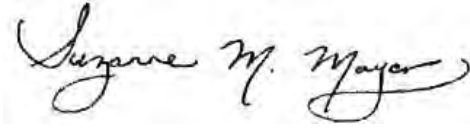

Trustee Flaherty	-	aye
Trustee Rock	-	aye
Trustee Van Meter	-	aye
Trustee Vasquez	-	aye
Trustee Kothari	-	aye

PUBLIC COMMENT

There was no public comment presented to the Administration Committee.

There was no further business brought before the committee and Trustee Rock moved that the meeting be adjourned. The motion was seconded by Trustee Kothari, and it passed via all trustees present voting in favor.

Respectfully submitted,

A handwritten signature in black ink, reading "Suzanne M. Mayer". The signature is written in a cursive style with a large initial 'S' and a long, sweeping underline.

Re: Project Velocity Update

The SURS Information Technology Department is here before the Administration Committee today to present an update regarding Project Velocity; our ongoing project to replace our legacy pension administration system (PAS) with one that is built upon modern technology and design principles.

Presenting today will be myself, Jefferey Saiger, CTO, and Erica Oropeza, lead project manager from our implementation partner, Linea Solutions.

Currently, SURS has wrapped up the second major testing cycle, Val2, and is underway with work that will comprise the last major phase of development for the new PAS. Unfortunately, we are exiting Val2 feeling as though we are at risk in terms of scheduling of work to be done as well as overall product quality.

We will share this update, along with our mitigation steps, during this conversation.

As always, questions and feedback regarding the project are welcome.

Thank you for your continuing support of this initiative.

Re: Administrative Expense and Capital Budget – Fiscal Year 2025

Overview

Annually, the administrative expense and capital budget is submitted for approval. The administrative expense budget covers all operational costs of the Defined Benefit Plan, the Retirement Savings Plan (RSP), the Deferred Compensation Plan (DCP) and the Investment Department administrative expenses. The total proposed Fiscal Year 2025 administrative budget is \$36,544,583 or 0.9% more than the Fiscal Year 2024 budget of \$36,228,452.

The capital budget includes major initiatives, services, and purchases. The total proposed Fiscal Year 2025 capital budget is \$11,450,513 and includes the Pension Administration System (PAS) work to be performed in Fiscal Year 2025. The capital budget excluding the PAS is \$2,672,500 which is an increase of \$265,831 or 11% compared to the Fiscal Year 2024 budget of \$2,406,669 (excluding the PAS).

Recommendation

SURS staff recommends:

- **That the Fiscal Year 2025 Administrative Expense Budget be approved as presented.**
- **That the Fiscal Year 2025 Capital Expenditure Budget be approved as presented.**

Re: Fiscal Year 2025 SURS Administrative and Capital Budget

We are pleased to submit for your review and approval the Administrative Operating Expense and Capital Budget for the State Universities Retirement System (SURS) for the Fiscal Year 2025, which begins July 1, 2024, and ends June 30, 2025. The budget reflects the staff's commitment to provide services and programs in alignment with the SURS mission and strategic goals. Our staff has been resilient through the challenges of changes in administration, state funding and pension reform. The staff continues to service our members and employers with skill, professionalism, and passion.

The proposed Fiscal Year 2025 administrative budget of \$36,544,583 is a 0.9% increase over prior year's budget and a 14.4% increase over the prior year's projected actual. The total proposed Fiscal Year 2025 capital budget is \$11,450,513 and includes the Pension Administration System (PAS) implementation work to be performed in Fiscal Year 2025. The capital budget excluding the PAS is \$2,672,500 which is an increase of \$265,831 or 11% compared to the Fiscal Year 2024 budget of \$2,406,669.

Thank you to the management team for their assistance as we completed the Fiscal Year 2025 budget.

Sincerely,

A handwritten signature in black ink that reads 'Suzanne M. Mayer'.

FY24 Projected actual vs FY25 Budget variance:

Salaries/Wages

Overall expected cost of salary increases	631,500	4.2%
Positions vacant in all of FY24-to be filled in FY25*	666,700	4.5%
Budgeted cost for new position added in FY25*	155,000	1.0%
FY25 planned promotions/reclassifications	112,500	0.8%
Other compensation/timing adjustments	225,501	1.5%
	1,791,201	12.0%

Insurance

Contracted increase between CMS and insurance companies	1,267,768
New/vacant positions	338,130
	1,605,898

* Vacant and new position salaries and benefits are prorated depending on when we anticipate filling the position. For positions that we have already advertised and are recruiting, a full year will be budgeted in FY25. Other positions that we anticipate hiring later in the fiscal year are prorated to include between three to ten months of the associated salaries and benefits cost.

FY 2024 Budget vs FY 2024 Projected Actual

	FY 2024 Budget	FY 2024 Projected Actual	\$ Increase from Prior Yr Budget	% Increase from Prior Yr Budget	
Statistical & Tabulation	5,337,815	3,599,963	(1,737,851)	-32.6%	Software licenses related to the PAS project (\$430k) were budgeted here for FY24 but were moved to capital as part of the implementation of GASB 96. We also did not hire as many contractors as we anticipated when doing the FY24 budget. Some software purchases were also delayed due to staff bandwidth and timing. The IT/Facilities Risk GAP analysis project was \$124k underbudget.
Recruitment and Relocation	200,000	26,759	(173,241)	-86.6%	FY24 budget included fees for the recruitment and/or relocation of vacant senior level positions (including certain IT positions). Some of the anticipated cost ended up hitting in FY23 and other portions were not utilized as expected.
Medical/Disability Program	5,000	2,500	(2,500)	-50.0%	
Auditing and Management Services	118,902	68,000	(50,902)	-42.8%	Employer Audits were not done in FY24 so that employers could focus on the census audits being performed for the OAG. The Actuarial Audit was completed underbudget.
Professional & Technical	1,212,452	1,157,963	(54,489)	-4.5%	Budgeted lobbyist services were not utilized in FY24. Banking fees were down compared to budget and RSP consulting services were overbudget.
Actuarial Services	355,600	297,733	(57,867)	-16.3%	The extent that GRS is used for special projects varies from year to year.
Legal Fees	518,000	467,173	(50,827)	-9.8%	Costs related to General Legal and Fiduciary Counsel were lower than budgeted.
Postage	257,200	212,606	(44,594)	-17.3%	A Member Services project budgeted in FY24 for \$40k did not end up being done and will carry over to FY25.
Copying, Photographic & Printing	48,500	52,611	4,111	8.5%	
Surety Bond & Insurance	576,000	575,367	(633)	-0.1%	
Freight & Express Mail	5,000	8,500	3,500	70.0%	
EDP Equipment Repairs & Maintenance	256,468	245,822	(10,646)	-4.2%	
Office Rental	30,000	30,360	360	1.2%	
Office Equipment Repairs & Maintenance	12,500	12,500	-	0.0%	
Equipment Rental-Telephone	293,150	315,285	22,135	7.6%	
Subscriptions & Information Services	100,554	102,655	2,101	2.1%	
Office & Library Supplies	55,740	43,133	(12,607)	-22.6%	
Meeting Expenses	2,075	1,372	(703)	-33.9%	
Printing Supplies	34,000	28,344	(5,656)	-16.6%	
EDP Supplies	50,000	29,733	(20,267)	-40.5%	
EDP Operating Equipment	167,220	155,082	(12,138)	-7.3%	
Registration & Conference Expenses	67,825	42,534	(25,291)	-37.3%	
Employee Training Programs	118,125	71,411	(46,714)	-39.5%	HR had anticipated obtaining training resources for staff, but that was not completed in FY24. Training for IT staff was also down since several positions remained vacant.
Board Travel	25,000	21,500	(3,500)	-14.0%	
Board Meeting	20,000	16,000	(4,000)	-20.0%	
Association Fees	32,829	31,752	(1,077)	-3.3%	
Employee Tuition	2,500	1,203	(1,297)	-51.9%	
Travel	139,740	124,233	(15,507)	-11.1%	
Building & Grounds Maintenance	277,700	235,000	(42,700)	-15.4%	There were fewer repairs completed than were anticipated during budgeting
Utilities	197,219	143,748	(53,471)	-27.1%	We have had a substantial decrease in the electric bills due to the installation of the more energy efficient LED lighting during the renovations
Total Non-Personnel Expense	10,517,113	8,120,843	(2,396,270)	-22.8%	

FY 2024 Projected Actual vs FY 2025 Budget

	FY 2024 Projected Actual	FY 2025 Budget	\$ Increase from Actual	% Increase from Actual	
Statistical & Tabulation	3,599,963	3,525,510	(74,453)	-2.1%	Software licenses related to the PAS project were moved to capital as part of the implementation of a new GASB. That decrease is offset by an increase due to projects carried over from the prior year.
Recruitment and Relocation	26,759	66,000	39,241	146.6%	Increase due to an expansion of LinkedIn Recruiting tools, additional job advertising and increased career fair attendance.
Medical/Disability Program	2,500	5,000	2,500	100.0%	
Auditing and Management Services	68,000	-	(68,000)	-100.0%	Employer Audits will not be done in FY25 so that employers can focus on the census audits being performed for the OAG.
Professional & Technical	1,157,963	1,176,854	18,891	1.6%	
Actuarial Services	297,733	310,800	13,067	4.4%	
Legal Fees	467,173	451,616	(15,557)	-3.3%	
Postage	212,606	283,766	71,160	33.5%	Increase of \$40k expected for member notification required by new IRS regulations. Postage rate increases are also anticipated in FY25.
Copying, Photographic & Printing	52,611	49,520	(3,092)	-5.9%	
Surety Bond & Insurance	575,367	545,000	(30,367)	-5.3%	Decrease in Fiduciary Insurance cost due to consolidating the coverage down to two carriers (from three previously).
Freight & Express Mail	8,500	8,500	-	0.0%	
EDP Equipment Repairs & Maintenance	245,822	204,900	(40,922)	-16.6%	Various support contracts paid in FY24 are not due again until FY26, therefore, no cost was budgeted in FY25.
Office Rental	30,360	38,033	7,673	25.3%	
Office Equipment Repairs & Maintenance	12,500	12,750	250	2.0%

Date: June 6, 2024
Re: Investment Operations Budget – Fiscal Year 2025

Overview

SURS staff annually submits a budget for the Department's administrative expenses. The Department also presents a projection of investment management fees to be paid in accordance with fee agreements negotiated between SURS and each of its external managers. Staff routinely evaluates and monitors fees and expenses in an attempt to identify cost savings in the investment program.

Investment Department Budget: Administrative Expenses

The administrative expenses budget encompasses essential services for the management and fiduciary oversight of SURS' investments. The proposed fiscal year 2025 administrative expenses budget totals \$3.0 million. This proposed amount is around \$280,000 more than the \$2.8 million budget approved for fiscal year 2024. Of the \$3.0 million budget proposed for fiscal year 2025, \$2.8 million (or 92%) is allocated to three areas: investment consultants, external legal counsel, and custody, performance, and database expenses. Each of the major line items is discussed in greater detail below.

Investment Consulting

Investment consulting expenses for retainers are expected to increase by \$16,000 from the fiscal year 2024 budget. The increase is entirely attributable to the yearly increase for the consultants that is outlined in the consulting contracts for Meketa and Callan. Investment consulting expenses for projects are expected to increase by \$50,000 from the fiscal year 2024 budget. This increase relates to the cost of conducting an asset liability management study.

Investment Counsel

The investment counsel line remained the same as the fiscal year 2024 budget. The amount of legal expenses correlates to the amount of search activity to be completed and the resulting number of agreements to be drafted. Additional legal expenses may be incurred if revisions are made to existing agreement guidelines or if fees are renegotiated.

Custody, Performance & Databases

The custody, performance and database line increased by \$209,000 from the fiscal year 2024 budget. The proposed increase is attributable to the implementation of new risk management software following an RFP early in fiscal year 2025.

Resources

The resources category includes costs related to corporate governance, education, training, conferences, reference materials, subscriptions, participation in research projects and studies, RFP search advertisements, and professional dues and memberships. This line item increases by \$2,000 from fiscal year 2024 mainly due to the budgeted educational expenses for tuition reimbursement & CFA exam fees.

Investment Travel

The travel line includes transportation, meals and lodging to attend due diligence meetings, conferences and Investment Committee and Board meetings for the Department's staff. The travel budget increased by \$3,000 from the fiscal year 2024 budgeted amount. This increase is due to the amendment of Public Act 102-1119, section 12-2(f) of the State Finance Act which changed travel reimbursement rates to match those set by the federal government as well as an increase in due diligence visits with investment managers and consultants as the portfolio continues to grow in scale and complexity.

	FY 2024 Approved Budget	FY 2025 Proposed Budget	\$ Increase (Decrease)	% Increase (Decrease)
Investment Consultant - Retainer	\$ 896,500	\$ 912,500	\$ 16,000	1.8%
Investment Consultant - Projects	-	50,000	50,000	100.0%
Investment Counsel	655,000	655,000	-	0.0%
Custody, Performance & Databases	973,205	1,182,097	208,892	21.5%
Resources	176,625	178,660	2,035	1.2%
Travel	<u>60,000</u>	<u>63,000</u>	<u>3,000</u>	<u>5.0%</u>
Total Administrative Expenses	\$ 2,761,330	\$ 3,041,257	\$ 279,927	10.1%

Please note that the administrative expenses shown here do not include the Investment department personnel and benefits cost. Those costs are included in the amounts shown in the Administrative Expense & Capital Expenditure budget discussed prior to this presentation, and the year over year decrease in budgeted personnel expenses partly offsets this increase in administrative expenses.

Investment Management Fees

The investment management fees proposed for fiscal year 2025 are based upon February 29th, 2024 asset values adjusted for any known or anticipated cash flows occurring after that date, including the expectation of receiving 100% of appropriated state contributions. In total, overall assets are projected to increase 4.19% from February 29th, 2024 to February 28th, 2025. This projection considers both the asset return assumptions and the expected outflows needed to cover member benefits in excess of the state appropriation. The projected investment assets were then applied to the manager's current fee schedule to determine the investment management fee for the fiscal year. Performance-based fees were estimated in total by weighting the actual annual performance fees incurred over the past three years. No attempt is made, when constructing the projection, to attribute performance-based fees to specific managers. While some factors affecting portfolio assets are reasonably predictable (e.g., state appropriations and projected benefit payments), other factors like market performance are inherently

uncertain. A projected rate of growth was applied to each asset class as follows, based on the capital market assumptions provided by SURS' investment consultant:

Asset Class Growth Rates		
Strategy	Asset Class	Projected Annual Growth Rate
Crisis Risk	Alternative Risk Premia	6.40%
Crisis Risk	Long Duration	5.00%
Crisis Risk	Long Volatility	1.20%
Crisis Risk	Trend Following	4.70%
Inflation Sensitive	TIPS	4.70%
Non-Traditional Growth	Non-Core Farmland	10.30%
Non-Traditional Growth	Non-Core Infrastructure	10.00%
Non-Traditional Growth	Non-Core Real Assets	9.00%
Non-Traditional Growth	Private Equity	11.20%
Principal Protection	Fixed Income (Core)	4.10%
Stabilized Growth	Core Infrastructure	8.00%
Stabilized Growth	Core Real Estate	6.90%
Stabilized Growth	Emerging Market Debt - Hard	6.80%
Stabilized Growth	Emerging Market Debt - Local	6.20%
Stabilized Growth	Fixed Income (Public Credit)	5.40%
Stabilized Growth	Fixed Income (Private Credit)	9.20%
Traditional Growth	Global Equity	8.70%

The Fiscal Year 2024 Investment Management Fee Budget, accepted by the Investment Committee in June 2023, was \$134.8 million with actual expenditures currently anticipated to be approximately \$126.0 million. Assuming returns are in line with long-term asset class forecasts, fees are projected to be approximately \$150.6 million in fiscal year 2025. Total investment management fees are projected to increase by \$15.9 million from fiscal year 2024 budgeted fees and include fees paid directly from alternative asset funds. This increase is attributable to the continued growth of the private credit portfolio and the non-traditional growth portfolio as these asset classes reach the target allocations selected by the Investment Committee in 2021.

	FY 2024 Accepted Fees	FY 2025 Proposed Fees	\$ Increase (Decrease)	% Increase (Decrease)
Asset-Based Fees	\$ 122,935,179	\$ 137,578,584	\$ 14,643,405	11.9%
Performance-Based Fees	10,917,700	12,185,800	1,268,100	11.6%
Securities Lending Fees	478,300	544,100	65,800	13.8%
STIF Fees	434,400	337,900	(96,500)	(22.2)%
Total Investment Management Expenses	\$ 134,765,579	\$ 150,646,384	\$ 15,880,805	11.8%
Total fees as a % of assets (basis points)	57.1 bps	60.1 bps		

Recommended Action

Consistent with past years, staff is recommending the approval of the Investments Administrative Expense Budget for the fees and expenses relating to the operations and oversight of the SURS Investment Program.

Staff is recommending acceptance of the Investment Management Fees Budget. As a result of the challenge of accurately projecting the asset value of accounts and continual developments that affect performance-based fees, the SURS Board of Trustees has previously chosen to accept rather than approve the recommendation from staff. Staff is recommending the practice of accepting the budget be continued for fiscal year 2025.

Recommendations

SURS staff recommends that:

- **The Investment Department Administrative Expense Budget for fiscal year 2025 be approved as presented.**
- **The projected Investment Department Investment Management Fees for fiscal year 2025 be accepted as presented.**

**2024 Experience Review
Covering the Period
June 30, 2020 to June 30, 2023**

State Universities Retirement System of Illinois

**Amy Williams, ASA, EA, MAAA, FCA; Kevin Noelke, ASA, MAAA, FCA;
Brian B. Murphy, FSA, EA, MAAA, FCA, PhD and Kristen Brundirks**

Purpose of the Experience Study

- The experience study examines the actual experience of the plan during the three-year experience study period June 30, 2020, to June 30, 2023
- The actual experience is compared to the current actuarial assumptions
- Finally, based on this comparison and future expectations, recommendations are made for the actuarial assumptions to be used in the upcoming June 30, 2024, actuarial valuation
- Additional actuarial assumption recommendations are made for use in other administrative procedures

Scope of the Experience Study

- The study looks at the two primary areas of assumptions:
 - Economic assumptions; i.e., the “money” assumptions
 - Investment return, inflation, payroll growth, individual salary increase rates, assumed growth in the money purchase account balances (ERI assumption)
 - Demographic assumptions; i.e., the “people” assumptions
 - Retirement, termination, death, disability, future member plan elections

Funding Equation

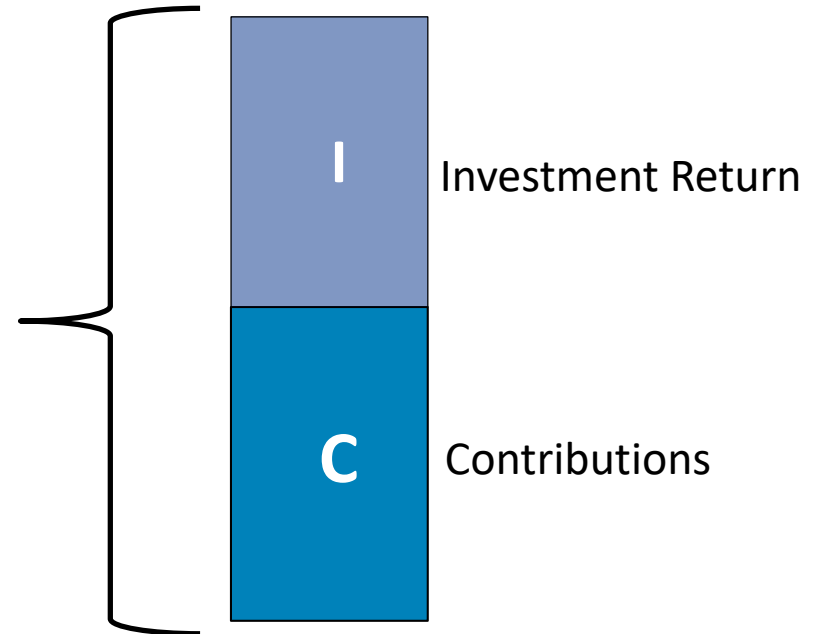

Over time, there are three main pieces of the actuarial funding equation:

$$C + I = B + e$$

Where:

- C = Contributions
- I = Investment Return
- $B + e$ = Benefits + expenses

**Total Value of
Benefits and
Expenses
($B + e$)**

How Assumptions Factor In...

- Actual experience determines the cost of benefits
- Assumptions help us develop a reasonable starting point for decision making today
- The cost of benefits:
 - Is NOT affected by actuarial assumptions or methods
 - IS determined by actual participant behavior (termination, retirement, etc.), plan provisions, and actual investment and other experience

Economic Assumptions

	Current
Price Inflation	2.25 %
Real Return	4.25 %
Investment Return	6.50 %
Prescribed Rate of Interest (for money purchase factors)	6.50 %
Effective Rate of Interest (for interest crediting on money purchase balances)	6.50 %
Base Salary Increase/Payroll Growth	3.00 %
COLA for Tier 2	1.125%

- Each economic assumption is set based on price inflation and an amount in excess of price inflation
- The table summarizes the economic assumptions used in the actuarial valuation as of June 30, 2023
- The following slides include supporting information for the recommended changes

Per ASOP No. 27: Reasonable Assumptions

- An economic assumption is reasonable if:
 - It is appropriate for the purpose of the measurement
 - It reflects the *actuary's* professional judgement
 - It takes into account historical and current economic data that is relevant as of the measurement date
 - It reflects the *actuary's* estimate of future experience
 - It has no significant bias (i.e., it is not significantly optimistic or pessimistic)
 - Although some allowance for adverse experience may be appropriate
- The standard advises an actuary not to give undue weight to recent experience
- The actuary may incorporate the views of experts but the assumption should reflect the *actuary's* professional judgment

Inflation Assumption

- The price inflation assumption is currently 2.25%
- For us, it is a building block for the investment return assumption

Total Investment Return = Real Return + Price Inflation

- So if the inflation assumption is raised or lowered, the investment return assumption must be reviewed with the revised inflation assumption

Forward-Looking Inflation Forecasts

Forward-Looking Price Inflation Forecasts				
	6/30/2023	9/30/2023	12/31/2023	3/31/2024
Congressional Budget Office				
5-Year Annual Average	2.83%	2.83%	2.83%	2.32%
10-Year Annual Average	2.57%	2.57%	2.57%	2.26%
Federal Reserve Bank of Philadelphia				
5-Year Annual Average	2.50%	2.68%	2.60%	2.30%
10-Year Annual Average	2.36%	2.40%	2.40%	2.24%
Federal Reserve Bank of Cleveland				
10-Year Expectation	1.75%	2.22%	2.28%	2.22%
20-Year Expectation	1.96%	2.29%	2.33%	2.31%
30-Year Expectation	2.11%	2.36%	2.39%	2.39%
Federal Reserve Bank of St. Louis				
10-Year Breakeven Inflation	2.20%	2.34%	2.18%	2.31%
20-Year Breakeven Inflation	2.48%	2.58%	2.42%	2.45%
30-Year Breakeven Inflation	2.23%	2.34%	2.19%	2.27%
U.S. Department of the Treasury				
10-Year Breakeven Inflation	2.10%	2.21%	2.09%	2.21%
20-Year Breakeven Inflation	2.40%	2.54%	2.37%	2.43%

50-Year Breakeven Inflation	2.29%	2.39%	2.29%	2.36%
100-Year Breakeven Inflation	2.37%	2.48%	2.36%	2.44%
Social Security Trustees				
Ultimate Intermediate Assumption	2.40%	2.40%	2.40%	2.40%

- We reviewed forward-looking price inflation forecasts.
- We also surveyed the inflation assumption used by well-known investment consulting firms across the country.
- In our sample of these firms, the inflation assumption ranged from 2.13% to 2.70%, with an average of 2.39%.
- Based upon this data, we recommend the price inflation assumption (currently 2.25%) be increased to 2.40%.

Investment Return Assumption

RETURN ON INVESTMENT

This assumption is used to predict what percentage of future benefit payments will be covered by investment return and what percentage will be covered by contributions

Lower returns require higher contributions and higher returns require lower contributions

Setting the Investment Return Assumption

Risk Tolerance

Asset Allocation

Investment Return Assumption

Asset Allocation Information from Meketa

Policy Targets (%)		
Classes/Strategies	Current	Long-term
BROAD GROWTH	68.0	68.0
Traditional Growth	36.0	35.0
Public Equity	36.0	35.0
Stabilized Growth	17.0	17.0
Core Real Assets	8.0	8.0
Options Strategies	0.0	0.0
Liquid Credit	6.5	4.0
Private Credit	2.5	5.0
Non-Traditional Growth	15.0	16.0
Private Equity	11.0	11.0
Non-Core Real Assets	4.0	5.0
INFLATION SENSITIVE	5.0	5.0
PRINCIPAL PROTECTION	10.0	10.0
CRISIS RISK OFFSET	17.0	17.0
Long U.S. Treasuries	2.0	2.0
Systematic Trend Following	10.0	10.0
Alternative Risk Premia	3.0	3.0
Long Volatility	1.7	1.7
Tail Risk	0.3	0.3
Total	100.0	100.0
Annual Volatility	10.5%	10.6%
Expected Geometric Return - 10 Year	6.7%	6.8%
Expected Geometric Return - 20 Year	7.8%	7.9%

- Meketa expects an average 10-year return of 6.7% to 6.8%.
- We analyzed the portfolios with our own model. This provides the Board additional assurance regarding the portfolio expectations and enables us to meet our own professional requirements.

The “current policy” is expected to change over time, evolving toward and actually becoming the long-term policy within the next few years.

GRS Analysis

- GRS does not provide investment advice and does not develop its own Capital Market Assumptions (“CMAs”)
- GRS collected CMAs from 13 different investment firms
- GRS considers the views of the plan’s consultant and compares them with the views of the 13 investment firms

Firms and Time Horizons in the GRS Analysis

Firms

- Aon Hewitt
- Blackrock
- BNY Mellon
- Callan
- Cambridge
- JPMorgan
- Meketa (the SURS Consultant)
- Mercer
- NEPC
- Northern Trust
- RVK
- Verus
- Wilshire

Time Horizons

- 12 firms provided shorter-term CMAs (most were 10-year time horizons)
- Three provided CMAs based on 20-year horizons
- Five provided CMAs based on 30-year horizons
- GRS then mapped the SURS asset allocations into the CMAs of each firm

The Importance of the Near Term

Modeling Results

		Meketa		GRS Capital Market Assumption Modeler Probability of Exceeding			
		Geo. Return	Volatility	6.50%	6.75%	6.25%	6%
Current Target	10-year	6.7%		53%	50%	56%	59%
	20-year	7.8%	10.5%	57%	53%	61%	65%
Long-term Target	10-year	6.8%		54%	51%	57%	60%
	20-year	7.9%	10.6%	58%	54%	62%	66%

Modeling results shown above are based on current (2024) capital market assumptions and asset allocation.

2024 capital market assumptions are lower compared to the 2023 capital market assumptions.

An optimal assumption would have a probability close to or above 50% over both the 10- and 20-year horizons. (Based on the 2024 capital market assumptions, the current assumption of 6.50% achieves this.)

GRS figures are normalized to the proposed 2.40% inflation assumption. The average inflation assumption of the investment firms who provided CMAs is 2.39%.

Investment Return Recommendation

- We recommend maintaining the current 6.50% assumption
 - Based on the 2024 capital market assumptions, the 6.50% assumption has slightly over a 50% probability of being achieved (which is optimal)
 - We caution against changing the assumption (both upward and downward changes) in reaction to a significant change in capital market assumptions from one year to the next
- A probability higher than 50% also represents a margin for adverse deviation as discussed in actuarial standards

Interest Crediting on Member Balances

Fiscal Years Ending June 30,	Assumed overall Rate of Return - Valuation	ERI assumption used in the actuarial valuation	ERI "Legacy" approved by the SURS Board of Trustees*	ERI declared by the Comptroller's Office
2025			7.00%	7.50%
2024	6.50%	7.00%	6.50%	7.00%
2023	6.50%	6.50%	6.25%	6.25%
2022	6.50%	6.50%	5.50%	5.50%
2021	6.50%	6.50%	6.00%	6.00%
2020	6.75%	6.75%	6.50%	6.50%
2019	6.75%	6.75%	6.50%	6.75%
2018	6.75%	6.75%	6.50%	6.50%
2017	7.25%	7.00%	7.00%	6.75%
2016	7.25%	7.00%	7.00%	7.00%
2015	7.25%	7.00%	7.00%	6.75%
2014	7.25%	7.00%	7.00%	6.75%
2013	7.75%	7.00%	7.50%	6.50%
2012	7.75%	7.75%	7.50%	6.75%
2011	7.75%	7.75%	7.50%	7.00%

- Interest crediting on SURS member account balances is related to past and expected future investment performance
- Based on the Comptroller ERI calculation for FY 2025, the 20-year expected return is 7.17% and there is a positive adjustment for past investment experience vs. past ERIs
- We recommend the assumed ERI ***for valuation purposes*** be set at 7.00% for FY 2026 and after

* For purposes of calculating service purchases, refunds for excess contributions and for lump sum retirements and refunds under the Portable Plan.

Recommended assumptions for the actuarial valuation as of June 30, 2024 are bolded and italicized.

Economic Assumptions

	Current	Proposed
Price Inflation	2.25 %	2.40 %
Real Return	4.25 %	4.10 %
Investment Return	6.50 %	6.50 %
Prescribed Rate of Interest (for money purchase factors)	6.50 %	6.50 %
Effective Rate of Interest (for interest crediting on money purchase balances)	6.50 %	7.00 %
Base Salary Increase/Payroll Growth	3.00 %	3.15 %
COLA for Tier 2	1.125%	1.20 %

- The table summarizes the economic assumptions used in the actuarial valuation as of June 30, 2023 and the proposed assumptions

Salary Increase Assumption

- The current service-based salary increase rates are the same for Academic and Non-Academic employees and vary based on whether an employee is younger than age 50 or age 50 or older.
- Based on the actual salary increases during the experience study period, we observed different rates of increase for Academic and Non-Academic employees (in addition to different rates of increase for employees younger or older than age 50.
 - Therefore, we recommend separate salary increase rates for Academic and Non-Academic and maintaining service-based rates that differ by whether an employee is younger or older than age 50

Salary Increase Assumption

- Following is a summary of the average salary increases for each of the three years of the experience study separately for Academic and Non-Academic employees.
- For the year ending June 30, inflation was 0.65 % for 2020, 5.39% for 2021 and 9.06% for 2022.
- We expect that the higher than expected increases in 2023 were influenced by the higher rates of inflation.
- Increases were higher, on average, for Non-Academic employees compared to Academic employees.

	Academic				Non-Academic				
Years of Service	Year Ending 6/30/2021	Year Ending 6/30/2022	Year Ending 6/30/2023	3-Year Average	Year Ending 6/30/2021	Year Ending 6/30/2022	Year Ending 6/30/2023	3-Year Average	Difference 3-Year Average

Salary Increase Assumption

- The proposed salary increase rates are higher than the current assumption (but lower than the rates of increase observed during the experience study period)
- The following table summarizes the average annual increases under the current and proposed assumptions at different points in an employee's career

Service at Valuation	Service at End of Career	Average Annual Salary Increases					
		Academic			Non-Academic		
		Actual Increase	Current Assumption	Proposed Assumption	Actual Increase	Current Assumption	Proposed Assumption
0	20	6.42%	5.82%	6.08%	6.35%	5.82%	6.01%
0	25	5.82%	5.30%	5.50%	5.86%	5.30%	5.50%
0	30	5.40%	4.95%	5.13%	5.51%	4.95%	5.17%
0	35	5.05%	4.70%	4.85%	5.26%	4.70%	4.92%
10	20	4.27%	4.02%	4.12%	4.85%	4.02%	4.37%
10	25	3.99%	3.76%	3.83%	4.54%	3.76%	4.08%
10	30	3.82%	3.64%	3.69%	4.35%	3.64%	3.94%
10	35	3.65%	3.55%	3.59%	4.23%	3.55%	3.83%

The rates of increase in the table assume the member was hired at age 35 (and therefore the rates applicable to ages 50 and older begin at 15 years of service).

Approach for Reviewing Plan Experience

- We reviewed demographic plan experience using a liability-weighted approach
 - Analyzing experience on a liability-weighted basis gives additional credibility to decrements that occur to members with a higher liability (due to higher pays, more service or younger ages)
 - The liability amounts shown in the experience tables are total liability amounts divided by \$100,000
- We reviewed plan experience during the three-year experience study period from June 30, 2020 through June 30, 2023
 - We considered the impact of COVID-19 on plan experience in making assumption recommendations
 - Mortality experience from June 30, 2020 through June 30, 2021 was excluded due to the unusual and hopefully non-recurring mortality experience during the year (attributable to COVID-19)
 - Mortality experience from June 30, 2017 through June 30, 2020 was also included in developing the recommended mortality assumption (for five years of plan experience in total)

Demographic Findings of the Experience Study

- Demographic findings:
 - We are recommending maintaining different assumptions based on employment classifications (Academic and Non-Academic) based on distinct differences in experience
 - Mortality rates based on tables developed from public sector pension plan mortality experience (Pub-2010) and the most recent MP-2021 projection scale
 - Teachers table used for Academic members (with adjustments for SURS experience)
 - Increases in life expectancies for retirees compared to the current assumptions
 - General Employee table used for Non-Academic members (with adjustments for SURS experience)
 - Decreases in life expectancies for male retirees and increases for female retirees compared to the current assumptions
 - Safety Employee table used for Police group
 - Slightly lower rates of turnover
 - Minor changes to retirement rates for Academic and for Non-Academic
 - No change to rates of disability for males and slightly lower rates of disability for females
 - Maintain plan election assumption for Academic: 55% Tier 2, 45% RSP
 - Maintain plan election assumption for Non-Academic: 75% Tier 2, 25% RSP
 - Maintain buyout election assumption of 0%

Academic/Non-Academic Membership Summary

	Full-Time Active Member Counts			FY 2023 Payroll (\$ in Millions)		
	SURS	RSP	Total	SURS	RSP	Total
Academic	19,078	5,345	24,423	\$1,417	\$616	\$2,033
Non-Academic	<u>39,294</u>	<u>7,404</u>	<u>46,698</u>	<u>2,349</u>	<u>602</u>	<u>2,951</u>
Total	58,372	12,749	71,121	3,766	1,218	4,984

	Retiree and Beneficiary Counts		FY 2023 Annualized Benefits (\$ in Millions)	
	SURS		SURS	
Academic	32,300		\$1,577	
Non-Academic	<u>40,280</u>		<u>1,400</u>	
Total	72,580		2,977	

Credibility of Mortality Experience

	Liability Needed For Full Credibility (Dollars in \$100,000)	Observed Deaths	Z-Factor	Best Fit	Final Scale Factor
Academic					
Healthy Male Retirees	\$10,976	\$11,635	103%	96%	96%
Healthy Female Retirees	\$8,831	\$3,799	66%	105%	103%
Non-Academic					
Healthy Male Retirees	\$7,451	\$6,188	91%	102%	102%
Healthy Female Retirees	\$5,591	\$5,166	96%	104%	104%
Disabled Male Retirees	\$4,879	\$268	23%	195%	122%
Disabled Female Retirees	\$4,408	\$217	22%	126%	106%
Academic					
Male Active Members	\$15,575	\$466	17%	94%	99%
Female Active Members	\$9,506	\$201	15%	97%	100%
Non-Academic					
Male Active Members	\$6,842	\$513	27%	172%	120%
Female Active Members	\$5,880	\$304	23%	116%	104%

Healthy retiree, disabled and active member experience is based on liability amounts (liability amounts divided by 100,000).

All experience is for the time period June 30, 2017 through June 30, 2020 and June 30, 2021 through June 30, 2023. Experience from June 30, 2020 through June 30, 2021 was excluded due to the unusual and hopefully non-recurring mortality experience during the year (attributable to COVID-19).

Mortality Assumptions Recommendations

Academic Applicable Group	Base Table Mortality Table	Current Assumptions		Proposed Assumptions	
		Male Scaling Factor	Female Scaling Factor	Male Scaling Factor	Female Scaling Factor
Pre-retirement	Pub-2010 Employee Mortality Table (for Teachers)	101%	97%	99%	100%
Post-retirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for Teachers)	99%	105%	96%	103%
Post-retirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees)	112%	110%	122%	106%

Non-Academic (non-Police) Applicable Group	Base Table Mortality Table	Current Assumptions		Proposed Assumptions	
		Male Scaling Factor	Female Scaling Factor	Male Scaling Factor	Female Scaling Factor
Pre-retirement	Pub-2010 Employee Mortality Table (for General Employees)	114%	105%	120%	104%
Post-retirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	99%	107%	102%	104%
Post-retirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees)	112%	110%	122%	106%

The mortality rates for Police are current the same as for Non-Academic members.

The proposed mortality assumption for Police is based on 100% of the Pub-2010 mortality tables for Safety Employees.

Mortality Assumption – Life Expectancies

Future Life Expectancy (Years) in 2023 Based on Postretirement Mortality

Age	Current Academic		Current Non-Academic		Proposed Academic		Proposed Non-Academic	
	Male	Female	Male	Female	Male	Female	Male	Female
40	48.32	50.05	45.92	48.20	48.62	50.30	45.67	48.56
45	43.09	44.81	40.68	42.92	43.39	45.06	40.44	43.28
50	37.88	39.58	35.56	37.75	38.19	39.83	35.34	38.11
55	32.76	34.45	30.67	32.80	33.07	34.69	30.46	33.14
60	27.80	29.50	25.95	27.96	28.09	29.74	25.75	28.28
65	23.02	24.68	21.44	23.26	23.31	24.91	21.26	23.57
70	18.48	20.01	17.17	18.76	18.76	20.23	17.01	19.06
75	14.27	15.58	13.24	14.56	14.53	15.78	13.10	14.83

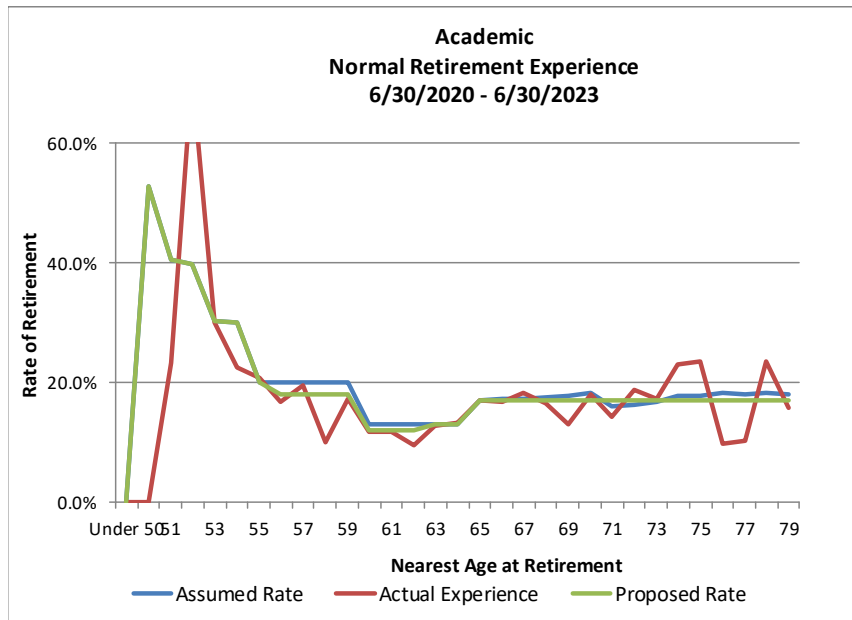

Change in Future Life Expectancy (Years) in 2023

Age	Proposed Academic		Proposed Non-Academic	
	Male	Female	Male	Female
40	0.30	0.25	(0.25)	0.36
45	0.30	0.25	(0.24)	0.37
50	0.31	0.25	(0.23)	0.36
55	0.31	0.25	(0.21)	0.35
60	0.30	0.23	(0.20)	0.33
65	0.29	0.23	(0.18)	0.31
70	0.28	0.22	(0.16)	0.30
75	0.26	0.20	(0.14)	0.27

Retirement Assumption – Normal Retirement

We recommend slight changes to the Tier 1 Academic and Non-Academic normal retirement rates

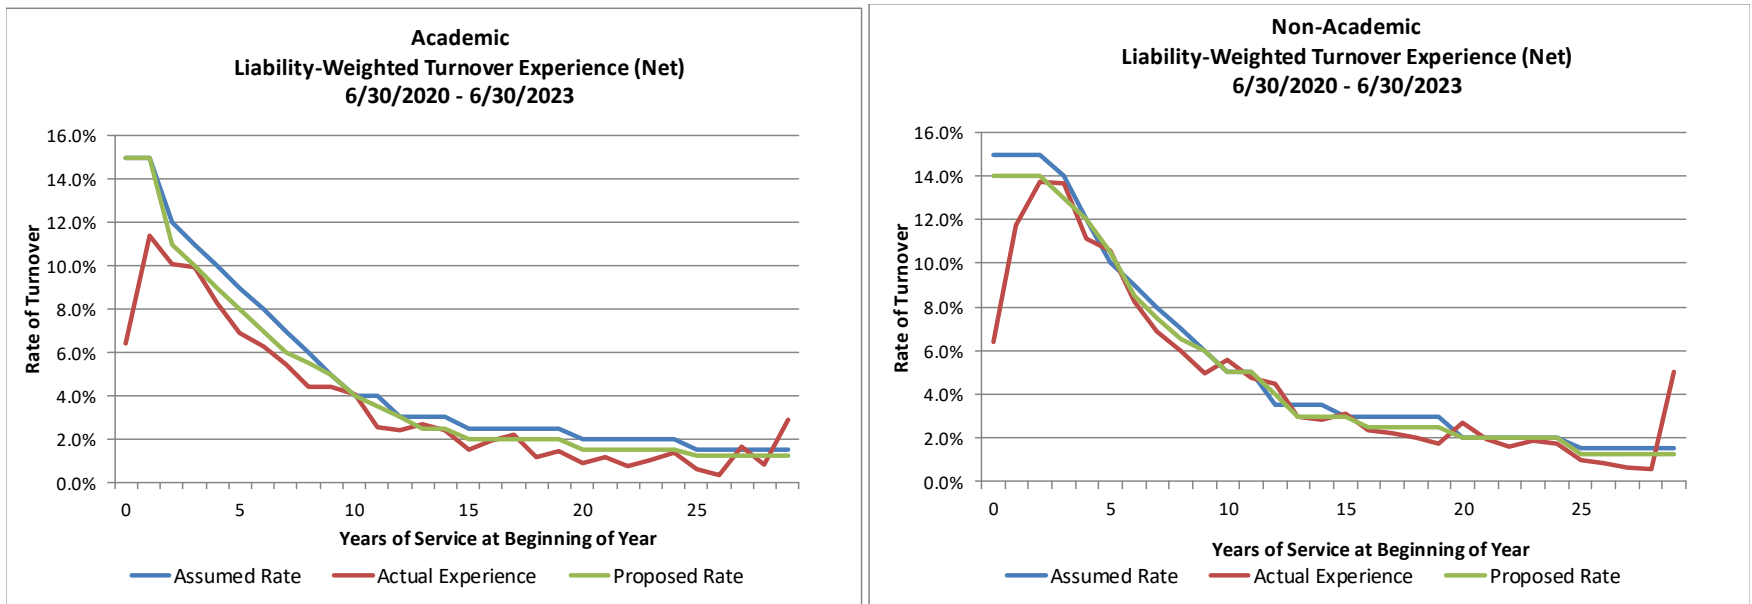

Current rates for employees with 40+ years of service are 1.5 times the rates for employees with less than 40 years of service.

We recommend the same rates for all years of service.

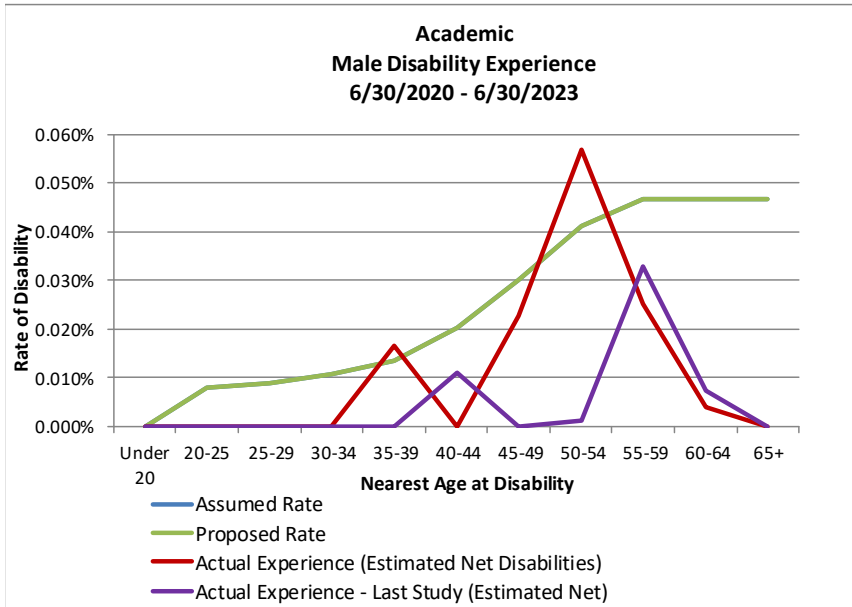

Termination Assumption

Decreases in rates and slight differences between Academic and Non-Academic

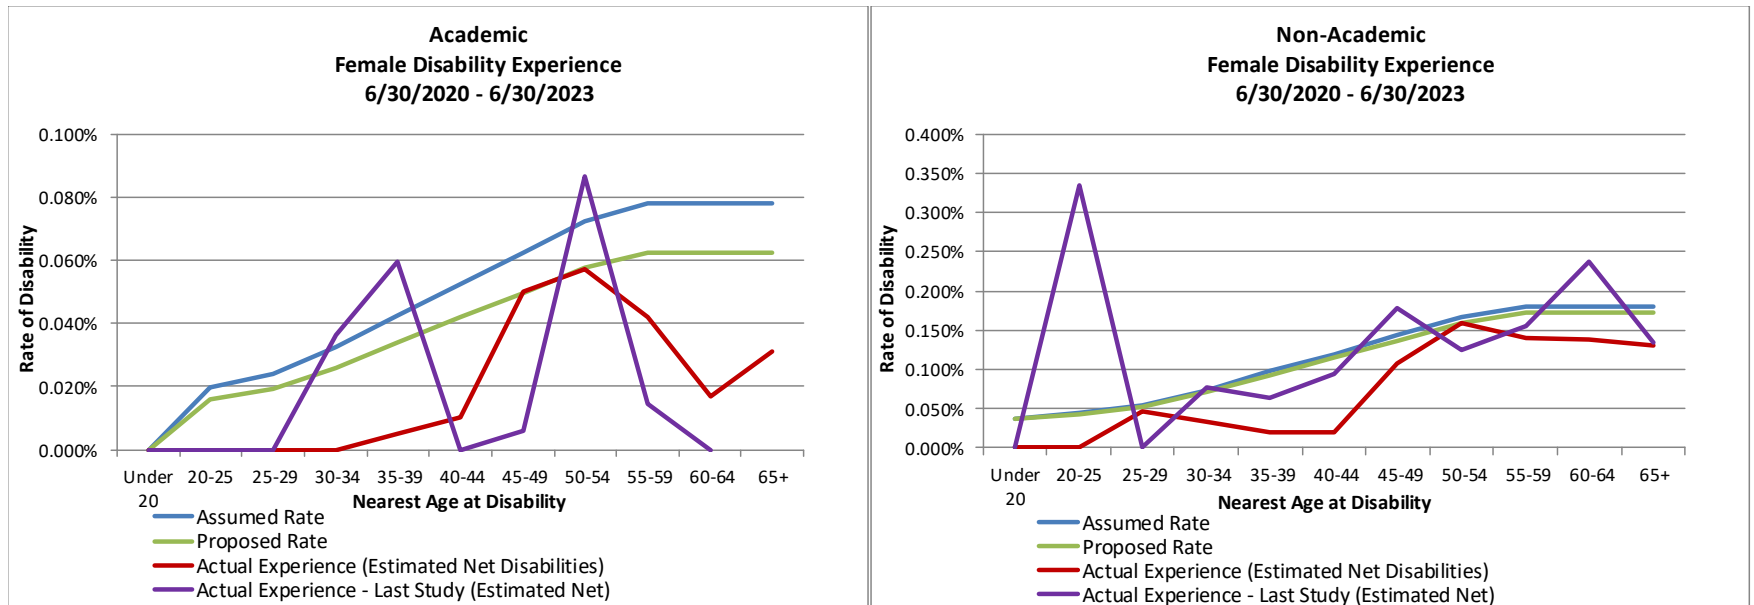

Disability Assumption - Males

No proposed changes in rates for Academic or Non-Academic

Disability Assumption - Females

Decreases in rates for Academic and for Non-Academic

Plan Election

Fiscal Year End	RSP Election		RSP % of			RSP % of
	Total	Total	Total	RSP Payroll	Total Payroll	Total

Grand Total	6,234	34,208	18%	\$ 391,604,867	\$ 1,354,911,076	29%

- The percentage of new hires electing the Retirement Savings Plan (RSP) was slightly lower during the current experience study period than during the last experience study period
- Academic employees continue to elect the RSP (instead of the SURS Tier 2 defined benefit plan) at higher rates than Non-Academic employees
- Higher-paid employees continue to elect the RSP at higher rates than lower-paid employees
- We recommend no change to the current assumption
 - 45% of Academic new hires elect RSP
 - 25% of Non-Academic new hires elect RSP

Recommendations from the Experience Study – Other Administrative Processes

The following factors are updated every three years based on the interest rate and mortality assumptions approved from the experience study (Pub-2010 mortality and maintaining the 6.50% investment return assumption)

- Money Purchase Factors
- Portable Joint and Survivor Factors
- Option 1 Reversionary Factors
- Pop-Up Reversionary Factors
- Military Service Factors
- Employer 6% Billing Factors
- Death Benefit Annuity Factors
- Portable Benefit Package Actuarial Factors (pre-retirement survivor annuity on a Portable death with a survivor)

Change in Money Purchase – Conversion Factors

- Updated money purchase conversion factors are needed since the mortality assumptions have been revised
 - Account balance that is annuitized does not change as a result of assumption changes, therefore:
 - Benefit amount decreases when assumption for future life expectancies increases (benefits are expected to be payable for a longer period of time from the same account balance)
 - Benefit amount decreases when assumption for expected future investment return decreases (lower benefits can be paid from the same account balance and a lower amount of investment income)
 - There is no impact due to investment return changes
- The two most recent sets of updated money purchase factors have been effective approximately one year after the updated assumptions were reflected in the actuarial valuation
 - Money purchase factors based on the assumptions adopted in the June 30, 2018 actuarial valuation were effective July 2, 2019
 - Money purchase factors based on the assumptions adopted in the June 30, 2021 actuarial valuation were effective July 2, 2022

Mortality Assumptions Used for Money Purchase Conversion Factors

- Separate mortality assumptions are recommended for valuation purposes for Academic and Non-Academic; however, a combined mortality assumption* is recommended for money purchase and other factors
 - There are other reasonable methods that could be used such as developing separate factors for Academic and Non-Academic and then blending those

Postretirement (non-disabled) for Applicable Group	Base Table Mortality Table	Male Scaling Factor	Female Scaling Factor
Academic	Pub-2010 Healthy Retiree Mortality Table (for Teachers)	96%	103%
Non-Academic	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	102%	104%
Combined Academic and Non-Academic*	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	90%	95%

Future mortality improvements are reflected by projecting the base mortality tables from 2010 using the MP-2021 projection scale.

Unisex rates (45%/55%) male/female are used for the factors.

Sex-distinct rates are used in the actuarial valuation.

Impact of New Money Purchase Factors

The general formula may result in higher benefits than the money purchase benefits. The illustrative change in money purchase factors is based on the mortality assumption change.

SUMMARY

We have made our recommendations for assumption changes in accordance with the Actuarial Standards of Practice, recommending assumptions that reflect a best estimate for future experience

Experience studies are required to be performed every three years (based on Statute)

The State Actuary annually reviews the SURS actuarial valuation report and assumptions

Impact of Recommended Assumptions

- The financial impact of implementing the recommended assumption changes based on the results as of the most recent actuarial valuation date of June 30, 2023 is:
 - A net increase in the actuarial accrued liability, unfunded actuarial accrued liability and statutory contribution requirement
 - A decrease in the funded ratio

Impact of Recommended Assumptions

	Dollars in Millions			
	Actuarial Valuation as of 6/30/2023	Proposed Assumptions	Total Change	% Increase (Decrease)
Actuarial Accrued Liability				
1. Active Members	\$ 12,465.9	\$ 12,667.6	\$ 201.7	1.62%
2. Benefit Recipients				
a. Retirement	\$ 32,997.0	\$ 33,238.5	\$ 241.5	0.73%

Financial Impact of Proposed Changes

\$ in Millions

Combined SURS and RSP (Includes State and Employer Contribution)

Fiscal Year	Impact With					
	Baseline		Phase-In*		Difference	
	<u>Dollar</u>	<u>% of Pay</u>	<u>Dollar</u>	<u>% of Pay</u>	<u>Dollar</u>	<u>% of Pay</u>
2024	\$2,186.028	40.62%	\$2,186.028		\$0.000	
2025	2,267.994	41.12%	2,267.994		0.000	
2026	2,321.023	41.02%	2,342.693	41.11%	21.670	0.09%
2027	2,364.397	40.69%	2,394.138	40.83%	29.741	0.14%
2028	2,466.906	41.33%	2,503.120	41.47%	36.215	0.14%
2029	2,533.954	41.36%	2,578.588	41.54%	44.634	0.17%
2030	2,595.689	41.30%	2,648.742	41.51%	53.054	0.21%

The financial impact is illustrated based on a projection from the June 30, 2023 actuarial valuation which determines the fiscal year 2025 statutory contribution. The assumption changes are expected to first be effective with the June 30, 2024 actuarial valuation and will, therefore, first affect the fiscal year 2026 statutory contribution.

**Under the statutory funding policy, the contribution rate impact from assumption changes is to be recognized over a five-year period.*

State Universities Retirement System of Illinois

2024 Experience Review Covering the Period
June 30, 2020, to June 30, 2023

May 23, 2024

Board of Trustees
State Universities Retirement System of Illinois
1901 Fox Drive
Champaign, Illinois 61820

Subject: Experience Review Covering the Period June 30, 2020, to June 30, 2023

Dear Members of the Board:

At your request, we have performed a review of the actuarial assumptions used in the annual actuarial valuation of the State Universities Retirement System of Illinois ("SURS"). The primary purpose of the study is to determine the continued appropriateness of the current actuarial assumptions by comparing actual experience to expected experience. Our study was based on census information for the period from June 30, 2020, to June 30, 2023, as provided by SURS Staff.

Our study includes a review of the experience associated with the following actuarial assumptions:

- Price Inflation;
- Investment Return;
- Salary Increases;
- Wage Inflation (based on uncapped pay);
- Effective Rate of Interest;
- Mortality;
- Disability;
- Withdrawal; and
- Retirement.

The results of this analysis are set forth in Section II of this report. Section III contains the cost impact on the Statutory contribution and funded status of the plan as a result of the assumption modifications. Finally, Section IV contains a summary of all proposed rates.

Amy Williams and Kevin Noelke are Members of the American Academy of Actuaries ("MAAA") and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

Board of Trustees
State Universities Retirement System of Illinois
Page 2

The signing actuaries are independent of the plan sponsor.

This report should not be relied on for any purpose other than the purpose stated. This report may be provided to parties other than SURS only in its entirety and only with the permission of SURS. GRS is not responsible for unauthorized use of this report.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

This report is based upon information, furnished to us by SURS, concerning retirement and ancillary benefits, active members, deferred vested members, retirees and beneficiaries, and financial data. If your understanding of this information is different, please let us know. This information was checked for internal consistency, but it was not audited.

The results of the experience study and recommended assumptions set forth in this report are based on the data and actuarial techniques and methods described above, and upon the provisions of SURS as of the most recent valuation date, June 30, 2023. To the best of our knowledge, the information contained in this report is accurate and fairly presents the experience of members participating in the SURS defined benefit plans for the period June 30, 2020, through June 30, 2023. All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board.

Respectfully submitted,
Gabriel, Roeder, Smith & Company

Amy Williams, ASA, EA, FCA, MAAA
Senior Consultant

Kevin Noelke, ASA, FCA, MAAA

SECTION I

EXPERIENCE REVIEW SUMMARY

Experience Review Summary

Background

For any pension plan, actuarial assumptions are selected that are intended to provide reasonable estimates of future expected events, such as System investment returns, interest crediting, and patterns of retirement, turnover and mortality. These assumptions, along with an actuarial cost method, the employee census data and the plan's provisions are used to determine the actuarial liabilities and overall actuarially determined funding requirements for the plan. The true cost to the plan over time will be the actual benefit payments and expenses required by the plan's provisions for the participant group under the plan. To the extent the actual experience deviates from the assumptions, experience gains and losses will occur. These gains (losses) then serve to reduce (increase) future actuarially determined contributions and increase (reduce) the funded ratio. The actuarial assumptions should be individually reasonable and consistent in the aggregate. They should also be reviewed periodically to ensure that they remain appropriate. The actuarial cost method, for plan sponsors that use actuarially based funding policies, automatically adjusts contributions over time for differences between what is assumed and the actual experience under the plan.

Actuarial Standards of Practice ("ASOPs")

The Actuarial Standards Board ("ASB") provides guidance on measuring the costs of financing a retirement program through the following Actuarial Standards of Practices ("ASOPs"):

- (1) ASOP No. 4, *Measuring Pension Obligations and Determining Pension Plan Costs or Contributions*;
- (2) ASOP No. 27, *Selection of Economic Assumptions for Measuring Pension Obligations*;
- (3) ASOP No. 35, *Selection of Demographic and Other Noneconomic Assumptions for Measuring Pension Obligations*;
- (4) ASOP No. 44, *Selection and Use of Asset Valuation Methods for Pension Valuations*;
- (5) ASOP No. 51, *Assessment and Disclosure of Risk Associated with Measuring Pension Obligations and Determining Pension Plan Contributions*; and
- (6) ASOP No. 56, *Modeling*.

The recommendations provided in this report are consistent with the preceding actuarial standards of practice.

Assumptions Reviewed

The actuarial assumptions are usually divided into two categories:

- (1) Economic assumptions, which include:
 - Assumed rate of price inflation (as measured by the change in the Consumer Price Index for all urban consumers)
 - Underlies all other economic assumptions
 - Basis for cost-of-living increases for members hired on or after January 1, 2011
 - Assumed long-term rate of return on investments (prescribed rate as defined in statute)
 - Rate at which projected benefits are reduced to present value
 - Basis for money purchase annuity factors

Experience Review Summary

- Assumed effective rate of interest (rate at which member contributions are accumulated to generate benefits under the Money Purchase Benefit formula – Rule 2)
- General wage increases
 - Reflects inflationary forces on increases in pay for all members

The economic assumptions are generally chosen on the basis of the actuary's expectations as to the effect of future economic conditions on the operation of the plan, with input from Staff, the Board and other investment advisors.

The economic assumptions will be reviewed later this spring. This study includes review of the demographic assumptions.

(2) Demographic assumptions, which include the following rates:

- Mortality;
- Retirement;
- Disablement; and
- Withdrawal (other termination of employment).

Demographic assumptions are generally based on the plan's own experience, taking into account emerging trends. Rates of salary increase due to promotion and longevity are also related to the plan's experience.

The accuracy and extent of the data is an important consideration in assessing demographic experience. The accuracy of the data for this study was generally good, but a very large amount of data is required to develop a credible mortality table. The approach we have taken to recommending a mortality assumption for the SURS actuarial valuation is based on the model described by the Society of Actuaries (SOA). In effect, we select a base mortality table from the Pub-2010 mortality tables and a mortality improvement scale. We then use what is termed "the limited fluctuation credibility procedure" to determine the appropriate scaling factor of the base mortality tables for each gender and each member classification.

(3) Other methods and assumptions including the following:

- a. Cost method;
- b. Amortization method;
- c. Asset smoothing method;
- d. Dependent assumptions;
- e. Assumptions on reciprocal service and service purchases;
- f. Assumptions on refund of contributions vs. deferred annuity;
- g. Pay increase and decrement timing assumptions; and
- h. Plan election assumptions (Traditional/Portable vs. Retirement Savings Plan).

Key Findings and Recommendations

Gabriel, Roeder, Smith & Company ("GRS") has performed an experience study of the State Universities Retirement System of Illinois ("SURS") for the period from June 30, 2020, to June 30, 2023. The primary

Experience Review Summary

purpose of the study was to compare the SURS plan experience and future expectations for experience against the actuarial assumptions used in the actuarial valuation. Our study was based on the information used to perform the annual actuarial valuations for the period from June 30, 2020, to June 30, 2023.

Following is a summary of the key findings and recommendations:

- **Price inflation:** We recommend increasing the rate of assumed inflation from 2.25% to 2.40%.
- **Investment return:** We recommend maintaining the investment return assumption at 6.50%. This reflects increasing the underlying assumed price inflation from 2.25% to 2.40% and decreasing the assumed real rate of return from 4.25% to 4.10%. We will monitor the assumptions for continued reasonableness in the future.
- **General wage inflation assumption:** We recommend increasing the general wage inflation assumption from 3.00% to 3.15%. This reflects maintaining the assumed rate for productivity increases of 0.75% and increasing the underlying assumed price inflation from 2.25% to 2.40%.
- **Salary increase:** We recommend modifying the overall assumed salary increase rates to reflect a small overall increase, having separate rates for Academic and Non-Academic employees and maintaining the current salary increase rate structure of different salary increase rates for employees younger than age 50 and age 50 and older.
- **Effective rate of interest assumption:** We recommend increasing the long-term assumption for the ERI for crediting the money purchase accounts from 6.50% per year to 7.00% per year.
- **Normal retirement rates:** We recommend maintaining separate rates for members in Academic positions than for members in Non-Academic positions and making minor adjustments to the rates. The overall rates for Academic members are lower and the overall rates for Non-Academic members are higher than under our current assumptions based on the observed experience.
- **Early retirement rates:** We recommend maintaining separate rates for members in Academic positions than for members in Non-Academic positions. The overall rates for Academic members are lower and the overall rates for Non-Academic members are higher than under our current assumptions based on the observed experience.
- **Turnover rates:** We recommend maintaining separate rates for members in Academic positions than for members in Non-Academic positions. In total, the proposed turnover rates produce fewer expected number of terminations than the current turnover rates for both Academic and Non-Academic members.
- **Mortality rates:** We recommend:
 - Continuing to use the Pub-2010 Mortality tables that are based on public sector pension plan experience;
 - Continuing to use the Pub-2010 Mortality tables for Teachers for the Academic non-disabled members, continuing to use the Pub-2010 Mortality tables for General Employees for the Non-Academic (non-Police) non-disabled members and using the Pub-2010 Mortality tables for Safety Employees for the Non-Academic (Police) non-disabled members;
 - Using the Pub-2010 Disabled Mortality table for Non-Safety Employees for both Academic and Non-Academic disabled members;

Experience Review Summary

- Updating the projection scale from the MP-2020 to the MP-2021 scale (the most recent projection scale);
- Maintaining the MP-2021 projection scale until the assumptions are studied with the next experience study; and
- Applying certain scaling factors to the base tables based on the actual experience for the period June 30, 2017, through June 30, 2020 and June 30, 2021, through June 30, 2023 and the credibility that can be applied to that experience.

The specific mortality table recommendations and a more detailed description of the new mortality tables can be found in Section II.

- **Disability rates:** We recommend maintaining separate rates for members in Academic positions and members in Non-Academic positions and maintaining separate rates for males and females. We recommend using 200% of the Non-Academic rates for the Police group. We recommend no change to the current disability rates for males and slight decreases for females based on observed experience.
- **Money purchase conversion factor assumptions:** By statute, the money purchase conversion factors are to be updated when the investment return assumption and/or the mortality assumption are updated. Therefore, the recommended changes will result in updates to the money purchase conversion factors. The effective date of the updated money purchase conversion factors will be determined by the Board and historically has been about one year after the valuation date in which the updated assumptions are reflected. We recommend a blended mortality assumption be used for purposes of the money purchase conversion factors that would apply to both Academic and Non-Academic members.
- **Plan Election:** We recommend maintaining the plan election assumptions that for the Non-Academic members, 75% elect Tier 2 and 25% elect to participate in the Retirement Savings Plan (RSP), and for the Academic members, 55% elect Tier 2 and 45% elect to participate in the Retirement Savings Plan (RSP).
- **Load for reciprocal benefits, service purchases and refunds of excess contributions:** We recommend maintaining the liability load of 10% on the liabilities for service retirees whose benefits have not been finalized and a “best formula” benefit has not been provided and a 5% load if a “best formula” benefit has been provided.
- **Pay increases during the final rate of earnings period (used for 6% employer billing contributions):** We recommend maintaining the current assumption that pay increases will be lower than 6.00% during the final average earnings period and therefore there will be no contributions received or liability losses generated by members receiving pay increases in excess of 6.00% during the final average earnings period.
- **Buyout election assumptions:** We recommend maintaining the buyout election assumption of 0% until the program ends or conditions change. This means that the savings from the buyout program will be recognized each year as they occur – a common approach for this type of program.

Experience Review Summary

The actuarial cost method, asset smoothing method and amortization method are set in statute. We have commented on the statutorily required methods and made recommendations outside of this report.

Section III contains the cost impact on the Statutory contribution and funded status of the plan based on the recommended assumptions. The recommended assumptions increase the actuarial liability and Statutory contribution and decrease the funded ratio.

In order to maintain the fiscal health of SURS, and to comply with the Actuarial Standards of Practice (applicable to all actuaries who practice in the United States), it is important to select actuarial assumptions that reflect reasonable estimates of future investment returns.

One factor to keep in mind is that Public Act 100-0023 requires any change in an actuarial assumption that increases or decreases the required State contribution to be implemented in equal annual amounts over a five-year period beginning in the state fiscal year in which the change first applies to the required state contribution. Any contribution increases attributable to changes in actuarial assumptions first effective in the June 30, 2024, actuarial valuation will be recognized over five years beginning with the fiscal year 2026 Statutory contribution.

SECTION II

EXPERIENCE ANALYSIS

Economic Assumptions

Economic assumptions reflect the effects of economic forces on the projections of retirement benefits payable from the plan and in the discounting of those benefits to present value.

These assumptions are based, at their core, on the assumed level of price inflation. Each economic assumption is then developed from expected spreads over price inflation. Since price inflation is relatively volatile and is subject to a number of influences not based on recent history, economic assumptions are less reliably based on recent past experience than are the demographic assumptions.

The key economic assumptions are:

1. Assumed Rate of Inflation – The rate of price inflation (as measured by the Consumer Price Index for all Urban consumers) which underlies the remainder of the economic assumptions.
2. Assumed Rate of Investment Return – The rate at which projected future benefits under the system are reduced to present value.
3. Rate of General Annual Pay Increases – This reflects inflationary forces on increases in pay for individual members.

Actuarial Standard of Practice No. 27

ASOP No. 27 provides guidance related to selecting economic assumptions, including the investment return, discount rate, inflation, postemployment benefit increases, compensation increases and any other related economic assumptions, such as the Effective Rate of Interest (ERI) assumption.

In developing specific actuarial assumptions, ASOP No. 27 requires the actuary to follow a general process of:

1. Identifying the components of the assumption;
2. Evaluating relevant data;
3. Considering specific and general factors related to the measurement; and
4. Selecting a reasonable assumption.

In evaluating relevant data, the actuary should include appropriate recent and long-term historic data, but not give undue weight to recent experience.

Further, under ASOP No. 27, an assumption is considered reasonable if:

- It is appropriate for the purpose of the measurement;
- It reflects the actuary's professional judgment;
- It takes into account historical and current economic data that is relevant as of the measurement date;
- It reflects the actuary's estimate of future experience, the actuary's observation of the estimates inherent in market data, or a combination thereof; and
- It has no significant bias (i.e., it is not significantly optimistic or pessimistic).

Also according to the ASOP No. 27, the actuary should recognize the uncertain nature of the items for which assumptions are selected and, as a result, may consider several different assumptions reasonable

Economic Assumptions

for a given measurement. The actuary should also recognize that different actuaries will apply different professional judgment and may choose different reasonable assumptions. As a result, a range of reasonable assumptions may develop both for an individual actuary and across actuarial practice.

Inflation

By “inflation,” we mean price inflation, as measured by annual increases in the Consumer Price Index (CPI). This inflation assumption underlies all of the other economic assumptions we employ. It not only impacts investment return, but also salary increase rates and the general wage inflation assumption. The current annual inflation assumption is 2.25%.

Over the five-year period from June 2018 through June 2023, the CPI-U has increased at an average rate of 3.90%. However, please remember that the assumed inflation rate is only weakly tied to past results.

The following table shows the average inflation over various periods, ending June 2023.

Fiscal Year	Annual Increase in CPI-U
2018-19	1.65%
2019-20	0.65%
2020-21	5.39%
2021-22	9.06%
2022-23	2.97%
3-Year Average	5.78%
5-Year Average	3.90%
10-Year Average	2.71%
20-Year Average	2.57%
25-Year Average	2.54%
30-Year Average	2.52%
40-Year Average	2.84%
50-Year Average	3.94%

The graph on the next page shows the average annual inflation, as measured by the increase in CPI-U, in each of the 10 consecutive 5-year periods over the last 50 years.

Economic Assumptions

The geometric average annual increase in price inflation was 2.52% per year over the last 30 years from June 1993 to June 2023, 2.57% over the last 20 years and 2.71% over the last 10 years.

The following graph illustrates the rate of inflation on a year by year basis over the last 30 years.

Since price inflation is relatively volatile and is subject to a number of influences not based on recent history, economic assumptions are less reliably based on recent past experience than are the demographic

Economic Assumptions

assumptions. Therefore, it is important not to give undue weight to recent experience. We must also consider future expectations as well.

Another source of information about future inflation is the market for US Treasury bonds. As of May 10, 2024, the 5- and 10-year Breakeven Inflation Rates as reported by the Federal Reserve Bank of St. Louis were both 2.34%.

We also surveyed the inflation assumption used by nationally recognized financial firms (investment consultants, asset managers and insurance companies) across the country. In our sample of these firms, the inflation assumption ranged from 2.13% to 2.70%, with an average of 2.39%.

Financial Firm	Financial Firm Inflation Assumption
1	2.60%
2	2.70%
3	2.25%
4	2.50%
5	2.40%
6	2.44%
7	2.20%
8	2.21%
9	2.21%
10	2.51%
11	2.51%
12	2.13%
Average	2.39%

Another point of reference is the Social Security Administration's (SSA) 2023 Trustees Report, in which the Office of the Chief Actuary is projecting a long-term average ultimate annual inflation rate of 1.8% in the high cost projection scenario, 2.4% under the intermediate cost projection scenario and 3.0% in the low cost projection scenario. The Social Security Trustees report uses the ultimate rates for their 75-year projections, much longer than the longest horizon we can discern from Treasuries and TIPS.

The following table presents a summary of inflation rate forecasts from various professional experts.

Economic Assumptions

Economic Assumptions

Following is a table with a summary of inflation rate forecasts from the various professional experts at different points in time. It is interesting to note the difference in the inflation forecasts from quarter to quarter since June 2023.

Forward-Looking Price Inflation Forecasts				
	6/30/2023	9/30/2023	12/31/2023	3/31/2024
Congressional Budget Office				
5-Year Annual Average	2.83%	2.83%	2.83%	2.32%
10-Year Annual Average	2.57%	2.57%	2.57%	2.26%
Federal Reserve Bank of Philadelphia				
5-Year Annual Average	2.50%	2.68%	2.60%	2.30%
10-Year Annual Average	2.36%	2.40%	2.40%	2.24%
Federal Reserve Bank of Cleveland				
10-Year Expectation	1.75%	2.22%	2.28%	2.22%
20-Year Expectation	1.96%	2.29%	2.33%	2.31%
30-Year Expectation	2.11%	2.36%	2.39%	2.39%
Federal Reserve Bank of St. Louis				
10-Year Breakeven Inflation	2.20%	2.34%	2.18%	2.31%
20-Year Breakeven Inflation	2.48%	2.58%	2.42%	2.45%
30-Year Breakeven Inflation	2.23%	2.34%	2.19%	2.27%
U.S. Department of the Treasury				
10-Year Breakeven Inflation	2.10%	2.21%	2.09%	2.21%
20-Year Breakeven Inflation	2.40%	2.54%	2.37%	2.43%
30-Year Breakeven Inflation	2.19%	2.27%	2.19%	2.26%
50-Year Breakeven Inflation	2.29%	2.39%	2.29%	2.36%
100-Year Breakeven Inflation	2.37%	2.48%	2.36%	2.44%
Social Security Trustees				
Ultimate Intermediate Assumption	2.40%	2.40%	2.40%	2.40%

Based on this information, our opinion is that it would be reasonable to increase the current price inflation assumption from 2.25% to 2.40%.

Economic Assumptions

Retiree Cost-of-Living Adjustment (COLA) and Increases in the Pay Cap for Pensionable Pay for Participants Hired on and After January 1, 2011

Automatic annual increases in the retirement annuity differ for employees who first become a participant before or on or after January 1, 2011. Employees who first became a participant before January 1, 2011, receive an increase equal to 3% of the current retirement annuity amount. Employees who first become a participant on or after January 1, 2011, receive an increase equal to the lesser of 3% or one-half the annual change in the Consumer Price Index-U, whichever is less, based on the originally granted retirement annuity.

Based on increasing the price inflation assumption to 2.40%, we recommend increasing the retiree COLA assumption from 1.125% to 1.20% for employees who first become a participant on or after January 1, 2011.

For participants who first became members on and after January 1, 2011, and are Tier 2 members, pensionable salary, upon which benefits and member contributions are based, is limited to \$106,800 in 2011 and increased by the lesser of 3% and one-half of the annual unadjusted percentage increase in the Consumer Price Index-U (but not less than zero) as measured in the preceding 12-month period ending with the September preceding the November 1, which is the date that the new amount will be calculated and made available to the pension funds.

Based on the recommended price inflation assumption of 2.40%, we recommend increasing the assumption from 1.125% to 1.20% for future increases in the pay cap for pensionable pay.

Economic Assumptions

Investment Return

For purposes of budgeting contributions as a level percentage of payroll, the assumed rate of investment return is used as the discount rate to determine the present value of the system's pension obligations. It is important to note that an actuarial investment return assumption based on expected future experience is a single estimate for all years and therefore implicitly assumes that returns above and below expectations will "average out" over time. In other words, the expected risk premium is reflected in the assumed rate of investment return in advance of being earned, while the investment risk is not reflected until actual experience emerges with each actuarial valuation.

The review of the investment return assumption in this report considers forward-looking measures of likely investment return outcomes for the asset classes in the current and long-term target SURS investment policies. We have compared this analysis with that of the System's Investment Staff and Investment Advisor, Meketa. We thank the System's Staff and Meketa for their cooperation. We have attempted to make our analysis as independent as possible and used our discussions with System Staff as confirmation of our understanding of the Board's investment objectives.

Our analysis is based on the GRS 2024 Capital Market Assumption Modeler (CMAM). The purpose of the CMAM is to assess the reasonability of the assumed rate of return for use in the actuarial valuations for the plan. In our professional judgment, the CMAM has the capability to provide results that are consistent with this purpose. A description of the strengths, limitations and weaknesses of the model are incorporated in this report. In our opinion, the limitations and weaknesses are not material. We performed tests to ensure that the model reasonably represents that which is intended to be modeled. We are relying on the GRS actuaries and Internal Software, Training, and Processes Team who developed and maintain the model.

Because GRS is a benefits consulting firm and does not develop or maintain its own capital market expectations, we request and monitor forward-looking expectations developed by several major financial firms (investment consultants, asset managers and insurance companies). We update our CMAM on an annual basis. The capital market assumptions in the 2024 CMAM are from the following financial firms (in alphabetical order): Aon Hewitt, Blackrock, BNY Mellon, Callan, Cambridge, JPMorgan, Meketa, Mercer, NEPC, Northern Trust, RVK, Verus, and Wilshire. We believe that the benefit of performing this analysis using multiple financial firms is to recognize the uncertain nature of the items affecting the selection of the investment return assumption. While there may be differences in asset classes, investment horizons, inflation assumptions, treatment of investment expenses, excess manager performance (i.e., alpha), etc., we have attempted to align the various assumption sets from the different financial firms to be as consistent as possible. In some cases, we have made minor adjustments or assumptions to align the various assumptions sets with our model.

Twelve of the 13 financial firms provided capital market assumptions over an investment horizon of approximately 10 years. Although financial firms often refer to this period as "short term," it is important to remember that 10 years is actually a very long time. Therefore, returns during the next 10 years will affect the plan's funding materially. Eight of the 13 financial firms provided capital market expectations over a longer horizon, varying between 20 and 30 years.

Each year, the GRS CMAM reflects the most up-to-date information at the time the data was collected (typically reflecting the firms' expectations at the beginning of the calendar year). Generally, the forward-

Economic Assumptions

looking returns in the 2024 survey are slightly lower than the return expectations in the 2023 survey. If we consider the three-year average of return expectations, the general expectations are even lower and the short-term fluctuations are diminished.

To the best of our ability, we have adapted the SURS's investment policy to fit with the financial firms' assumptions adjusting for these known differences in assumptions and methodology. The asset classes in the system's investment allocation often do not exactly align with the asset classes of all financial firms in the survey. This may require us to make approximations which can introduce some subjectivity into the process. In the following charts, to the extent possible, all returns are net of passive investment expenses and have no assumption for excess manager performance (alpha) in excess of active management fees. The information in this report is not intended to be construed as investment advice.

Economic Assumptions

Real Return

The allocation of assets within the universe of investment options will significantly impact the overall performance. Therefore, it is meaningful to identify the range of expected returns based on each fund's targeted allocation of investments and an overall set of capital market assumptions.

For purposes of this analysis, we have reviewed the following investment allocations based on Meketa's Board presentation from February 29, 2024:

Policy Targets (%)		
Classes/Strategies	Current	Long-term
BROAD GROWTH	68.0	68.0
<u>Traditional Growth</u>	36.0	35.0
Public Equity	36.0	35.0
<u>Stabilized Growth</u>	17.0	17.0
Core Real Assets	8.0	8.0
Options Strategies	0.0	0.0
Liquid Credit	6.5	4.0
Private Credit	2.5	5.0
<u>Non-Traditional Growth</u>	15.0	16.0
Private Equity	11.0	11.0
Non-Core Real Assets	4.0	5.0
INFLATION SENSITIVE	5.0	5.0
PRINCIPAL PROTECTION	10.0	10.0
CRISIS RISK OFFSET	17.0	17.0
Long U.S. Treasuries	2.0	2.0
Systematic Trend Following	10.0	10.0
Alternative Risk Premia	3.0	3.0
Long Volatility	1.7	1.7
Tail Risk	0.3	0.3
<i>Total</i>	100.0	100.0
Annual Volatility	10.5%	10.6%
Expected Geometric Return - 20 Year	6.7%	6.8%
Expected Geometric Return - 10 Year	7.8%	7.9%

ASOP No. 27, Section 3.6.2, states that “[d]ue to the uncertain nature of the items for which assumptions are selected, the actuary may consider several different assumptions reasonable for a given measurement. Different actuaries will apply different professional judgment and may choose different reasonable assumptions. As a result, a range of reasonable assumptions may develop, both for an individual actuary and across actuarial practice.”

Economic Assumptions

We compared the probabilities of achieving returns over a 10-year horizon. We compute the 40th, 50th, and 60th percentiles of returns as well as the probability of achieving the current assumption of 6.50%, and alternate assumptions of 6.75%, 6.25% and 6.00% over a 10-year horizon. These estimates are based on the assumption that the distribution of returns for the next 10 years is the same each year.

Asset Allocation	Distribution of 10-Year Average Geometric Net Nominal Return			Probability of exceeding	Probability of exceeding	Probability of exceeding	Probability of exceeding
	40th	50th	60th	6.50%	6.75%	6.25%	6.00%
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Current Target	5.9%	6.8%	7.6%	53.3%	50.4%	56.2%	59.0%
Long-term Target	6.0%	6.8%	7.7%	53.9%	51.0%	56.7%	59.6%

The 50th percentile return is also related to the geometric average return. The geometric average of a sequence of returns over a number of years is the compound average of those returns over the number of years compounded. As the number of years in the geometric average increase and if the distributions of returns each year are independent and identically distributed, then the geometric average will converge to the median return. The median return may be considered a reasonable rate of return for purposes of the valuation. The average of 50th percentile returns is about 6.8% under both the current and long-term policy targets.

Following is a summary of the expected returns over 10- and 20-year time horizons for the current and long-term policy targets from Meketa and a summary of the probability of exceeding different rates of return based on the results from the GRS CMAM.

		GRS Capital Market Assumption Modeler					
		Meketa		Probability of Exceeding			
		Geo. Return	Volatility	6.50%	6.75%	6.25%	6%
Current Target	10-year	6.7%		53%	50%	56%	59%
	20-year	7.8%	10.5%	57%	53%	61%	65%
Long-term Target	10-year	6.8%		54%	51%	57%	60%
	20-year	7.9%	10.6%	58%	54%	62%	66%

An important fact to consider when deciding what weight to put on shorter-term results or longer-term results is the amount of benefits that are projected to be paid in the next 10 years. As shown in the following table, about 45% of the present value of future benefits as of June 30, 2023, is attributable to benefits that are projected to be paid in the next 10 years and over 60% of the present value of future benefits as of June 30, 2023, is attributable to benefits that are projected to be paid in the next 15 years. Therefore, it is extremely important to consider shorter-term expectations in addition to longer-term expectations in setting the economic assumptions.

Economic Assumptions

(\$ In Millions)	
SURS Values as of June 30, 2023	
(1) Present Value of Future Benefits - PVB (6.50%)	\$57,601.35
(2) Market Value of Assets	\$23,193.25
(3) Present Value of Benefit Payments in Next 10 Years at 6.50%	\$25,932.26
as % of Total PVB (3)/(1)	45%
(4) Present Value of Benefit Payments in Next 15 Years at 6.50%	\$35,196.40
as % of Total PVB (4)/(1)	61%
(5) Present Value of Benefit Payments in Next 20 Years at 6.50%	\$42,039.88
as % of Total PVB (5)/(1)	73%
(6) Present Value of Benefit Payments in Next 30 Years at 6.50%	\$50,213.12
as % of Total PVB (6)/(1)	87%

Recommendation

Based on our analysis of the expected investment return, the 10-year and 20-year return expectations from Meketa, our recommended assumption for inflation of 2.40% and the SURS current and long-term policy target allocations, we recommend maintaining the investment return assumption of 6.50 percent for the actuarial valuation as of June 30, 2024.

We will monitor the assumed investment return assumption for continued appropriateness between full experience reviews. Also, any significant changes in the target asset allocation of the System may warrant an additional review of the rate of return assumption.

We believe that the recommended assumption can be supported by Actuarial Standard of Practice No. 27. Under the Standard, all economic assumptions must be selected to be consistent with the purpose of the measurement. The purpose of the measurement is to determine the contribution rate which will lead to the accumulation of assets to pay benefits when due.

Additional Considerations

The prescribed interest rate used to develop the money purchase conversion factors is equal to the investment return assumption used in the annual actuarial valuation. The money purchase conversion factors, which apply to Rule 2 benefit calculations (for members hired before July 1, 2005), by statute, are to be updated each time there is a change in the investment return assumption or the post retirement mortality assumption. Therefore, the money purchase factors would need to be updated in the near future based on our recommendation to modify the mortality assumption.

Economic Assumptions

Following is a table summarizing the recent changes in assumptions and the effective date of the money purchase factors:

Valuation Date	Updated Investment Return Assumption	Effective Date of Updated Money Purchase Factors
June 30, 2014 (investment return)/June 30, 2015 (mortality)	7.25%	January 4, 2016
June 30, 2018	6.75%	July 2, 2019
June 30, 2021	6.50%	July 2, 2022

Illustrations of the impact on money purchase benefits of changing the money purchase conversion factors can be found later in this report under "Other Valuation Assumptions."

Economic Assumptions

Effective Rate of Interest (ERI)

The assumed effective rate of interest impacts the projected benefits calculated in the actuarial valuation for members who were hired before July 1, 2005, and are eligible for benefits calculated under the highest of three formulas – the general formula, the money purchase formula and the minimum benefit formula. The assumed effective rate of interest also impacts the projected member contributions under the Portable Plan for purposes of refunds and lump sum retirements.

In order to value all future liabilities in the plan during the annual actuarial valuation, the actuary makes an assumption about the future effective rate of interest to be used in crediting the money purchase accounts and for Portable Plan lump sum retirements and refunds.

The actual Rule 2 Money Purchase ERI, or Effective Rate of Interest, is set by the Comptroller's office each year. Beginning with the Money Purchase ERI for fiscal year 2006, the State Comptroller determined the rate for purposes of crediting member contributions balances for the Rule 2 money purchase formula. The SURS Board of Trustees determined the ERI for years prior to fiscal year 2006 for all purposes, including money purchase, and continues to certify the ERI for purposes of calculating service purchases, refunds for excess contributions and for lump sum retirements and refunds under the Portable Plan.

The following table shows the ERI assumptions used in the actuarial valuation, the ERI assumption approved by the SURS Board and the actual ERI declared by the Comptroller's office for the last 15 years:

Fiscal Years Ending June 30,	Assumed overall Rate of Return - Valuation	ERI assumption used in the actuarial valuation	ERI "Legacy" approved by the SURS Board of Trustees*	ERI declared by the Comptroller's Office
2025			7.00%	7.50%
2024	<i>6.50%</i>	<i>7.00%</i>	6.50%	7.00%
2023	6.50%	6.50%	6.25%	6.25%
2022	6.50%	6.50%	5.50%	5.50%
2021	6.50%	6.50%	6.00%	6.00%
2020	6.75%	6.75%	6.50%	6.50%
2019	6.75%	6.75%	6.50%	6.75%
2018	6.75%	6.75%	6.50%	6.50%
2017	7.25%	7.00%	7.00%	6.75%
2016	7.25%	7.00%	7.00%	7.00%
2015	7.25%	7.00%	7.00%	6.75%
2014	7.25%	7.00%	7.00%	6.75%
2013	7.75%	7.00%	7.50%	6.50%
2012	7.75%	7.75%	7.50%	6.75%
2011	7.75%	7.75%	7.50%	7.00%

* For purposes of calculating service purchases, refunds for excess contributions and for lump sum retirements and refunds under the Portable Plan.

Recommended assumptions for the actuarial valuation as of June 30, 2024 are bolded and italicized.

Economic Assumptions

The methodology for the calculation of the ERI differs from the methodology used to review the investment return assumption in the following ways:

- The calculation of the ERI by the Comptroller uses a 20-year time horizon for expected future returns, whereas GRS focuses more on the 10-year expected returns for purposes of reviewing the investment return assumption.
- The calculation of the ERI by the Comptroller includes an adjustment for past SURS investment experience compared to past ERIs. These adjustments were 0.83% and 1.07% for the fiscal year 2024 and 2025 ERI. Favorable past SURS investment experience does not affect the investment return assumption used in the actuarial valuation (it is already reflected in the asset values used in the actuarial valuation).

The calculated Comptroller ERI for fiscal year 2024 and 2025 were 8.00% and 8.24%, respectively, but were certified at 7.00% and 7.50%, respectively, to reflect “the desirability of minimizing year over year fluctuations in ERI while reflecting fundamental changes in return experience and capital market expectations”.

We are recommending an increase to the assumed ERI for valuation purposes from 6.50% to 7.00% for the purpose of estimating future benefits and liabilities in the actuarial valuation for the Rule 2 money purchase conversions and for Portable Plan lump sum refunds and retirement conversions. The ERI each year that will be used to actually credit member accounts will continue to be calculated by the Office of the Comptroller and by SURS.

As an actuarial assumption change, this will only affect the actuarial valuation and the liability and funding results. This will not impact the actual benefits earned by the members. This change in actuarial assumption will increase the liabilities of the plan, since the assumption of a higher long-term rate of interest in the money purchase account will produce a higher assumed money purchase balance and therefore a higher future retirement benefit. A change in the assumed ERI credited to member accounts does not affect the factors used to convert the money purchase account balance to an annuity. (These factors are impacted by the assumed long-term rate of investment return and the mortality assumption.)

Economic Assumptions

General Wage Inflation

A General Wage Inflation (GWI) assumption represents the real wage growth over time in the general economy, (i.e., how much the pay scales themselves will change year to year). It does not necessarily reflect actual pay increases received by individuals or even how payroll in total may change, which can be impacted by population changes, etc. Wage inflation consists of two components, (1) a portion due to pure price inflation (i.e., increases due to changes in the CPI), and (2) increases in average salary levels in excess of pure price inflation (i.e., increases due to changes in productivity levels, supply and demand in the labor market and other macroeconomic factors).

The Average Wage Index (AWI), formerly named the National Average Earnings (NAE), series published in connection with the operation of the Social Security program, is a useful proxy for measuring general changes in wage levels in the economy. Increases in AWI typically exceed increases in the Consumer Price Index (CPI), although there are periods where the patterns are reversed. The economic argument for wages exceeding prices in the long run is that CPI is based on the prices of a fixed basket of goods whereas wages reflect innovations, real productivity growth, labor supply and demand and other factors in addition to pure price inflation.

Over the last 65 years, AWI has exceeded CPI 44 times and the averages over that period are 4.5% for AWI and 3.5% for CPI. The last 25 years has had fewer cases of high inflation, but the distinction between prices and wages still appears. Over the last 25 years, the average increase in AWI is 3.4% and the average increase in CPI is 2.2%.

As with the investment return assumption, past experience does not necessarily dictate future expectations. For a long-term view, the 2023 Annual Report from the Trustees of the Social Security Administration (SSA) assumes an intermediate average ultimate CPI of 2.4% over the next 75 years and an ultimate intermediate growth assumption for average wages in covered employment of 3.5%. The SSA

Economic Assumptions

report provides alternate “High-cost” assumptions of 1.8% CPI/2.3% wages and “Low-cost” assumptions of 3.0% CPI/4.8% wages.

We recommend maintaining the assumption for productivity increases at 0.75%. The 0.75% assumption is more consistent with the average salary increases (in excess of price inflation) that were received by SURS members with 35 or more years of service during the experience study period. Combining the recommendation of 0.75% for productivity increases with a 2.40% inflation assumption implies a wage growth assumption of 3.15%. These assumptions are summarized below:

	Current Assumption	Recommended Assumption
Price Inflation	2.25%	2.40%
Productivity Increases	0.75%	0.75%
Total Wage Inflation	3.00%	3.15%

Economic Assumptions

Salary Increase

The components that determine the total salary increase are wage inflation, merit and longevity increases and promotion increases. We have recommended an increase to the wage inflation component to reflect an increase in the price inflation assumption.

Following is a summary of the average salary increases for each of the three years of the experience study separately for Academic and Non-Academic employees. For the year ending June 30, inflation was 0.65% for 2020, 5.39% for 2021 and 9.06% for 2022. We expect that the higher than expected increases in 2023 were influenced by the higher rates of inflation.

Years of Service	Academic				Non-Academic				Difference 3-Year Average
	Year Ending 6/30/2021	Year Ending 6/30/2022	Year Ending 6/30/2023	3-Year Average	Year Ending 6/30/2021	Year Ending 6/30/2022	Year Ending 6/30/2023	3-Year Average	
1-10	6.80%	6.79%	9.81%	7.77%	6.51%	7.78%	10.34%	8.23%	0.45%
11-20	3.06%	3.74%	6.06%	4.25%	3.21%	4.77%	6.70%	4.91%	0.66%
21-30	2.12%	2.96%	5.40%	3.52%	2.38%	4.04%	5.73%	4.09%	0.56%
31+	2.11%	2.59%	4.16%	3.01%	2.45%	3.42%	5.09%	3.63%	0.62%
Total	3.87%	4.35%	6.81%	5.00%	4.67%	6.06%	8.26%	6.35%	1.35%
Total Expected	4.36%	4.27%	4.20%	4.28%	5.46%	5.32%	5.37%	5.38%	1.11%
Difference from Expected	-0.49%	0.07%	2.60%	0.72%	-0.78%	0.74%	2.90%	0.97%	0.25%

Following is a summary of the average actual salary increases during the first two years of service from the current experience study and the last four experience studies. We believe that the high increases are related to the salary data that is provided for newer members (and that pay for a partial year one year is compared to pay for a full year the following year). We recommend that the average increase rate over the first two years be used as the salary increase assumption for those years to account for both salary increases and how the salary data is reported. Short service members have a low liability, and therefore, any gains or losses related to salary experience for these members will minimally affected the valuation results.

Years of Service	Average Total Salary Increase				2024 – Academic	2024 – Non-Academic
	2010	2014	2018	2021		
1	77%	21%	5%	2%	10%	6%
2	33%	21%	17%	16%	25%	18%
Average Rate	53%	21%	11%	13%	17%	12%

The experience in Tables I(a) and I(b) and Graphs I(a) through I(c) shows that actual salary increases differ between employees older and younger than age 50 (with the same amount of service) and differ between Academic and Non-Academic employees. We recommend separate salary increase rates for Academic

Economic Assumptions

and Non-Academic employees in addition to maintaining separate rates for employees younger and older than age 50.

Table and Graph I compare the salary experience, current assumptions and recommended assumptions by years of service for each of the following:

- Table I(a) – Salary Experience by Service – Academic
- Table I(b) – Salary Experience by Service – Non-Academic
- Graph I(a) – Salary Experience by Service (3+ Years) – Academic
- Graph I(b) – Salary Experience by Service (3+ Years) – Non-Academic
- Graph I(c) – Salary Experience by Service (3+ Years) – Comparison of Academic and Non-Academic

The following table compares the rates of increase for an active member’s remaining career assuming the member was hired at age 35 (and therefore the rates applicable to ages 50 and older begin at 15 years of service).

The proposed rates assume a higher average annual rate of increase of between 0.05% and 0.26% for Academic compared to the current rates depending on length of career and service at the valuation) and a higher average annual rate of increase of between 0.19% and 0.35% for Non-Academic.

Service At Valuation		Service at End of Career		Average Annual Salary Increases			
				Academic		Non-Academic	
				Actual Increase	Current Assumption	Proposed Assumption	Actual Increase

Salary Scale Assumption

Graph I(b)

Actual price inflation was about 5.00% from July 1, 2019, through June 30, 2022 and 5.80% from July 1, 2020, through June 30, 2023 compared to the assumed inflation of 2.25% during the experience study period.

Salary Scale Assumption

Graph I(c)

Salary Scale Assumption

Graph I(d)

Demographic Assumptions

The following pages present the analysis of the demographic assumptions. These assumptions include assumed rates of mortality among active and retired members, retirement patterns, disability incidence and turnover patterns. These patterns generally take the form of tables of rates of incidence based on age and/or years of service.

Absent any significant changes in benefit provisions, these assumptions generally exhibit relative consistency over periods of time. As a result, each demographic assumption is normally reviewed by relating actual experience to that assumed over the recent past.

Actuarial Standard of Practice No. 35 – Selection of Demographic and Other Noneconomic Assumptions for Measuring Pension Obligations

ASOP No. 35 applies to actuaries when they are selecting demographic and all other assumptions not covered by ASOP No. 27, Selection of Economic Assumptions for Measuring Pension Obligations, to measure obligations under any defined benefit pension plan that is not a social insurance program as described in section 1.2, Scope, of ASOP No. 32, Social Insurance.

The actuary should identify the types of demographic assumptions to use for a specific measurement. In doing so, the actuary should determine the following:

- (a) The purpose and nature of the measurement;
- (b) The plan provisions or benefits and factors that will affect the timing and value of any potential benefit payments;
- (c) The characteristics of the obligation to be measured (such as measurement period, pattern of plan payments over time, open or closed group, and volatility);
- (d) The contingencies that give rise to benefits or result in loss of benefits;
- (e) The significance of each assumption; and
- (f) The characteristics of the covered group.

Not every contingency requires a separate assumption. For example, for a plan that is expected to provide benefits of equal value to employees who voluntarily terminate employment or become disabled, retire, or die, the actuary may use an assumption that reflects some or all of the above contingencies in combination rather than selecting a separate assumption for each.

Analysis Approach

The analysis of demographic experience is conducted for each assumption using a measure known as the “Actual to Expected (A/E) Ratio.” The A/E Ratio is simply the ratio of the actual number of occurrences of the event to which the assumption applies (e.g., deaths or retirements) to the number expected to occur in accordance with the assumption. An A/E Ratio of 1.00 indicates that the assumption precisely predicted the number of occurrences. An A/E Ratio exceeding 1.00 indicates that the assumption underestimated actual experience. Conversely, an A/E Ratio lower than 1.00 indicates that the assumption overestimated actual experience.

These are statistical analyses. As a result, there are several considerations we must keep in mind as we analyze these ratios:

Demographic Assumptions

- (1) An actuarial assumption is designed to reflect average experience over long periods of time (30 - 50 years). As a result:
 - (a) A deviation between actual experience and that expected from our assumptions for one or two years does not necessarily mean that the assumption should be changed.
 - (b) A change in actuarial assumption should result if the experience indicates a consistent pattern which is different from that assumed over a period of years.
- (2) The larger the amount of data available, the more reliable the statistics used in the analysis. As a result:
 - (a) Events that occur with great frequency (e.g., general employment turnover) are more credibly predictable than those occurring less frequently (e.g., active member death).
 - (b) In all cases, data covering the entire study period produce more credible results than data for a single year.
 - (c) Year by year experience is helpful only in identifying trends and determining whether the three-year data is truly reflective of the entire period.

This analysis is based on the actuarial valuation data for the three-year period from June 30, 2020, to June 30, 2023. (Additional years were used for analyzing the mortality assumptions.)

In addition to analyzing experience based on headcounts, we also analyzed experience on a liability-weighted basis. Analyzing experience on a liability-weighted basis gives additional credibility to decrements that occur to members with a higher liability (due to higher pays, more service or younger ages). The liability amounts shown in the experience tables are total liability amounts divided by \$100,000.

We reviewed experience separately based on employment classifications (Academic and Non-Academic). Following is a summary of the membership as of June 30, 2023 based on these classifications.

	Full-Time Active Member Counts			FY 2023 Payroll (\$ in Millions)		
	SURS	RSP	Total	SURS	RSP	Total
Academic	19,078	5,345	24,423	\$1,417	\$616	\$2,033
Non-Academic	39,294	7,404	46,698	2,349	602	2,951
Total	58,372	12,749	71,121	3,766	1,218	4,984

	Retiree and Beneficiary Counts		FY 2023 Annualized Benefits (\$ in Millions)	
	SURS		SURS	
Academic	32,300		\$1,577	
Non-Academic	40,280		1,400	
Total	72,580		2,977	

Retirement Assumption

Retirement

The Plan provisions establish the minimum eligibility requirements for retirement. Participants of the plan who became members before January 1, 2011, are in Tier 1 and participants of the plan who became members on or after January 1, 2011, are in Tier 2. Following is a summary of the retirement eligibility conditions for normal (unreduced) retirement and early (reduced) retirement for each Tier and member type (police officers and all others). The retirement eligibility conditions are based on age and years of service.

Police Officers		All Others	
Normal (Unreduced) Retirement		Normal (Unreduced) Retirement	
Tier 1	Tier 2	Tier 1	Tier 2
Age 55/20 Years	Age 60/20 Years	Age 62/5 Years	Age 67/10 Years
Age 50/25 Years	Age 67/10 Years	Age 60/8 Years	
		Any age/30 Years	
Early (Reduced) Retirement		Early (Reduced) Retirement	
Tier 1	Tier 2	Tier 1	Tier 2
	Age 62/10 Years	Age 55/8 Years	Age 62/10 Years

Retirement cost, however, is determined not by the minimum eligibility requirements but by the ages at which members actually retire. The actuarial valuation does not assume that everyone retires at earliest eligibility. The assumption about the timing of retirement once eligibility has been established is a major component in cost calculations. Note that higher rates of retirement at earlier retirement ages or years of service upon attaining retirement eligibility generally result in higher actuarially determined contributions, and vice versa.

The table below shows the number of actual Tier 1 retirements on a headcount basis during each year of the experience study period compared with the number expected under the current assumptions. There were more retirements than expected for police officers in each year of the experience study period. In total, there were fewer retirements than expected for the academic and non-academic groups during the experience study period.

Fiscal Year End	Academic			Non-Academic			Police		
	Tier 1 Normal Retirement								
	Actual	Current Assumption	Actual/Expected	Actual	Current Assumption	Actual/Expected	Actual	Current Assumption	Actual/Expected
2021	896	828	1.1	1,054	1,112	0.9	22	17	1.3
2022	673	753	0.9	1,107	999	1.1	23	18	1.3
2023	594	749	0.8	815	962	0.8	22	18	1.2

2021	64	83	0.8	150	178	0.8	0	0	
2022	68	77	0.9	200	165	1.2	0	0	
2023	48	72	0.7	128	154	0.8	0	0	
Total	180	232	0.8	478	498	1.0	0	0	

Retirement Assumption

The table below shows the number of actual Tier 2 retirements on a headcount basis during each year of the experience study period compared with the number expected under the current assumptions. There were fewer retirements than expected for the academic group and for the non-academic group. There was only one Tier 2 retirement from the police officers during the experience study period, and therefore, not enough experience to review the Tier 2 retirement assumptions for the police officers group.

Fiscal Year End	Academic			Non-Academic			Police		
	Tier 2 Normal Retirement								
	Actual	Current Assumption	Actual/Expected	Actual	Current Assumption	Actual/Expected	Actual	Current Assumption	Actual/Expected
2021	4	5	0.8	4	10	0.4	1	0	6.7
2022	5	12	0.4	22	21	1.0	0	0	0.0
2023	9	16	0.6	29	34	0.8	0	0	0.0
Total	18	34	0.5	55	65	0.8	1	1	1.3
Tier 2 Early Retirement									
2021	0	4	0.0	2	18	0.1	0	0	
2022	4	7	0.6	14	36	0.4	0	1	0.0
2023	8	11	0.7	17	46	0.4	0	1	0.0
Total	12	21	0.6	33	100	0.3	0	2	0.0

Normal Retirement Experience – Tier 1

Current and past experience has shown that retirement rates under this plan are correlated with age. Currently, the Plan uses age-based rates with higher rates at key ages, with 100% retirement at age 80. In addition, the experience showed differences in retirement patterns between members classified as academic and not classified as academic in the census data. Based on the retirement experience, we recommend the following changes to the Tier 1 retirement rates:

- Applying separate rates to police officers and continue to apply separate rates for members classified as academic and non-academic (non-police officers)
- Decrease rates for members with 40 or more years of service and younger than age 80
 - If the member has 40 or more years of service and is younger than age 80 change the rate from 1.5 times the rate applicable to members with less than 40 years of service to 1.00 times the rate applicable to members with less than 40 years of service for the academic and non-academic groups.
- Assume that 100% of Police officers retire at age 70

The recommended changes to the retirement rates reflect the actual experience on a liability-weighted basis over the past three years from the current experience study and different patterns for members classified as academic, non-academic (non-police) and police officers.

Retirement Assumption

Applying the proposed Tier 1 retirement rates to historical data generates the following liability-weighted retirements by age at retirement:

Nearest Age	Liability-Weighted Retirements (Amounts in \$100,000)								
	Academic			Non-Academic			Police		
	Actual	Current Assumption	Proposed Assumption	Actual	Current Assumption	Proposed Assumption	Actual	Current Assumption	Proposed Assumption

Retirement Assumption

Normal Retirement Experience – Tier 2

There is limited Tier 2 normal retirement experience. Based on the limited experience, we have recommended changes to the Tier 2 retirement rate at age 67 based on experience and recommend setting the Tier 2 retirement rates for ages 68 and older to the Tier 1 rates. There was only one Tier 2 police officer retirement, and therefore, we did not review Tier 2 police officer retirement experience.

Nearest Age	Liability-Weighted Retirements (Amounts in \$100,000)					
	Academic			Non-Academic		
	Actual	Current Assumption	Proposed Assumption	Actual	Current Assumption	Proposed Assumption
67-69	10	16	14	38	43	39
70-74	0	7	7	11	11	12
75-79	3	0	0	3	1	3
80+	0	2	2	0	1	1
Total	14	25	23	51	56	55
Under 80	14	23	21	51	55	54

Early Retirement Experience – Tier 1

Fewer Academic participants retired under Tier 1 early retirement eligibility than expected under the current assumptions and more non-Academic participants retired under Tier 1 early retirement eligibility than expected under the current assumptions. We recommend changes in rates to reflect these differences.

Nearest Age	Liability-Weighted Retirements (Amounts in \$100,000)					
	Academic			Non-Academic		
	Actual	Current Assumption	Proposed Assumption	Actual	Current Assumption	Proposed Assumption
55	210	222	222	520	484	514

Retirement Experience and Recommendations

Experience during the last three years was considered in the analysis shown on the following pages. The “Exposure” column shows the number of employees eligible to retire at various years of service or ages throughout the experience period. An individual could potentially be counted up to three times if eligible each year in the period. By tabulating employees in this fashion we are able to answer the question “For all employees eligible at condition X, how many retired?”

The tables and graphs on the following pages show experience for normal and early retirement.

- Table and Graph II(a)(i) – Tier 1 Normal Retirement Experience – Academic
- Table and Graph II(a)(ii) – Tier 1 Normal Retirement Experience – Non-Academic

Rates are for Tier 1 members only. Expected retirements for a member who has 40 or more years of service:

- 1.5 times the rate for under 40 years of service under the current assumptions (younger than age 80)
- The same rate as 40 years of service under the proposed assumptions

Separate retirement rates apply for Tier 2 members.

Tier 1 Normal Retirement Assumption

Graph II(a)(i)

Rates are for Tier 1 members only. Expected retirements for a member who has 40 or more years of service:

- 1.5 times the rate for under 40 years of service under the current assumptions (younger than age 80)
- The same rate as 40 years of service under the proposed assumptions

Separate retirement rates apply for Tier 2 members.

Non-Academic rates are used for members who are Police Officers for the current rates.

Rates for an academic or non-academic member who has 40 or more years of service:

- *1.5 times the rate for under 40 years of service under the current assumptions (younger than age 80)*
- *The same rate as 40 years of service under the proposed assumptions*

Rates for an academic or non-academic member who has 40 or more years of service:

- 1.5 times the rate for under 40 years of service under the current assumptions (younger than age 80)
- The same rate as 40 years of service under the proposed assumptions

Turnover Assumption

Turnover

Turnover experience during the last three years was considered in the analysis shown on the following pages. The “Exposure” column shows the number of employees at various years of service throughout the experience period.

The “Turnover” column shows the number of employees at various years of service who have gone from active status for reasons other than retirement and death. This includes members moving to inactive status as well as members terminating and receiving a refund of contributions.

Typically, we would consider a status change from active to inactive a termination in developing turnover rates. However, because some of these participants return to active status and accrue additional benefits, we have considered this in our analysis of turnover experience. The “Net Turnover” column shows the number of employees, by years of service, who went from inactive to active status between the experience study period of June 30, 2020, and June 30, 2023. While these participants are not necessarily the same exact participants who went to inactive status during the experience study period, we believe that using this data helps us develop proposed net effective turnover rates.

There were fewer terminations than expected under the current assumptions. Based on our analysis, we recommend maintaining service-based rates and making the following changes to the turnover rates:

- Slight decrease in rates at most years of service; and
- Maintain a pattern of decreasing termination rates by years of service.

In addition, we recommend continuing to assume that members who are eligible for a deferred benefit elect the option that is more valuable – return of contributions or a deferred benefit. This will provide a level of conservatism in the actuarial valuation.

The tables and graphs on the following pages show termination experience by service, including the impact of members returning from inactive to active status.

- Table III(a) and Graph III(a) – Termination Experience by Service – Academic
- Table III(b) and Graph III(b) – Termination Experience by Service – Non-Academic
- Table III(c) and Graph III(c) – Termination Experience by 5-Year Service Bands – Academic and Non-Academic

Disability Assumption

Disability

Disability experience during the last three years was considered in the analysis shown on the following pages. The “Exposure” column shows the number of employees in five-year age bands throughout the experience period.

We reviewed historical disability experience over the past 11 years and found that a high percentage of members receiving disability benefits cease receiving disability benefits and either return to active status or are classified as inactive status. Therefore, in addition to reviewing the number of new disabilities each year from active status, we reviewed the number of “net disabilities” each year. “Net disabilities” are disabilities that are expected to be long-term and exclude the incidences of disability where the benefits ceased. In addition, there are members who start receiving disability benefits who were classified as either active members or inactive members in the previous actuarial valuation. Therefore, we considered this in recommending disability rates. Approximately 55-60% of disabled members (on average) do not maintain their disabled status and return to active or inactive status. Therefore, we recommend maintaining proposed rates that are 60% of the recommended rates we would have proposed based on actual disability experience (without consideration of disabilities that cease). The rate of 60% is slightly higher than the actual rate of 55% (on average over the 11-year period) to account for the short-term cost for the disabled members who subsequently change from disabled status after receiving disability benefits.

The tables and graphs on the following pages show experience for disability.

- Table and Graph IV(a) – Male Disability Experience – Academic
- Table and Graph IV(b) – Female Disability Experience – Academic
- Table and Graph IV(c) – Male Disability Experience – Non-Academic
- Table and Graph IV(d) – Female Disability Experience – Non-Academic

The disability experience reflected on the following pages does not include disability experience for the RSP. The RSP disability assumption was separately studied and a separate report was issued.

Disability Assumption

We recommend no changes to the male disability rates and slight decreases to the female disability rates.

We recommend that 200% of the Non-Academic rates be used for the Police group. Due to the small size of the group and limited credibility of the data, we have not included detailed experience exhibits. The total population-weighted disability rates for male Police officers was about 0.3% and the total population-weighted disability rates for female Police officers was about 0.8% during the disability period.

Disability rates vary by age. Average rates for the five-year age bands are shown in the table above.

Current assumptions and proposed assumptions are based on liability weighting.

Actual to expected ratios for the proposed rates are based on estimated net disabilities (60% of actual disabilities).

Disability Assumption

Graph IV(c)

Experience (Estimated Net Disabilities) is equal to 60% of actual disabilities.

Disability rates vary by age. Average rates for the five-year age bands are shown in the table above.

Current assumptions and proposed assumptions are based on liability weighting.

Actual to expected ratios for the proposed rates are based on estimated net disabilities (60% of actual disabilities).

Disability Assumption

Graph IV(d)

Experience (Estimated Net Disabilities) is equal to 60% of actual disabilities.

Mortality Assumptions

Mortality

Post-retirement mortality is an important component in cost calculations and should be updated from time to time to reflect current and expected future longevity improvements. Pre-retirement mortality is a relatively minor component in cost calculations. The frequency of pre-retirement deaths is so low that mortality assumptions based on actual experience can only be produced for very large retirement systems.

Actuarial Standards of Practice

Actuarial Standards of Practice (ASOP) No. 35 Disclosure Section 4.1.1 states, “The disclosure of the mortality assumption should contain sufficient detail to permit another qualified actuary to understand the provision made for future mortality improvement. If the actuary assumes zero mortality improvement after the measurement date, the actuary should state that no provision was made for future mortality improvement.” The current mortality rates used in the valuation include a provision for future mortality improvement.

Experience Reviewed

We reviewed mortality experience separately for each year of the three-year experience study period (June 30, 2020 through June 30, 2023) and observed that mortality rates were higher in the year ending June 30, 2021 than the other two years of the experience study period and higher than each year from the last experience study (June 30, 2017, through June 30, 2020). In order to not have the impact of the COVID-19 pandemic skew the mortality experience, we excluded mortality experience for the year ending June 30, 2021, and used experience from the three-year period from the last experience study and the experience from June 30, 2021, through June 30, 2023, in recommending the mortality assumption to be used in the actuarial valuation.

Partial Credibility

We use what is termed “the limited fluctuation credibility procedure” to determine the appropriate scaling factor of the base mortality tables for each gender and each member classification. We used a liability-weighted basis for post-retirement non-disabled mortality, pre-retirement and post-retirement disabled mortality. In each case, the partial credibility factor (or “Z-factor”) is computed based on the experience of the specific group being studied. This Z-factor is a measure of the credibility of the pertinent group.

The Best Fit is the ratio of actual to expected deaths using the base table. The final scale is then determined as the weighted average of the Best Fit and 100% based on the Z-factor. For example, the Z-factor for Academic Male Active Members is 17%, suggesting that the data for this group is 17% credible (there were not enough deaths among active members to be completely credible). The Best Fit for this group would be to scale the base tables by 94%. The final scale of 99% is the credibility-weighted average ($99\% = 17\% \times 94\% + 83\% \times 100\%$). Factors for other groups are determined similarly. For Academic retired males, there were enough deaths (on a liability-weighted basis) to warrant full credibility on a lives basis. Therefore, the Best Fit is used as the final scale.

Mortality Assumptions

	Liability Needed For Full Credibility (Dollars in \$100,000)	Observed Deaths	Z-Factor	Best Fit	Final Scale Factor
Academic					
Healthy Male Retirees	\$10,976	\$11,635	103%	96%	96%
Healthy Female Retirees	\$8,831	\$3,799	66%	105%	103%
Non-Academic					
Healthy Male Retirees	\$7,451	\$6,188	91%	102%	102%
Healthy Female Retirees	\$5,591	\$5,166	96%	104%	104%
Disabled Male Retirees	\$4,879	\$268	23%	195%	122%
Disabled Female Retirees	\$4,408	\$217	22%	126%	106%
Academic					
Male Active Members	\$15,575	\$466	17%	94%	99%
Female Active Members	\$9,506	\$201	15%	97%	100%
Non-Academic					
Male Active Members	\$6,842	\$513	27%	172%	120%
Female Active Members	\$5,880	\$304	23%	116%	104%

Healthy retiree, disabled and active member experience is based on liability amounts (liability amounts divided by 100,000). All experience is for the time period June 30, 2017, through June 30, 2020, and June 30, 2021, through June 30, 2023. Experience from June 30, 2020, through June 30, 2021, was excluded due to higher mortality during the year (attributable to COVID-19).

Recommendations

We reviewed the mortality experience separately for active members, service retirees and disabled members during the five-year study period (June 30, 2017, through June 30, 2020, and June 30, 2021, through June 30, 2023) and separately by employee type (academic vs. non-academic). Police officer mortality experience was excluded from the non-academic mortality experience. The results are shown on the following pages.

Due to the very small size of the police group, we have not summarized mortality experience for this group. We are recommending that the mortality assumption for the police group be based on 100% of the Pub-2010 mortality tables (for Public-Safety Employees).

Mortality Assumptions

Following is summary of the current and proposed mortality assumptions for members classified as an employee type of academic:

Academic Applicable Group	Base Table Mortality Table	Current Assumptions		Proposed Assumptions	
		Male Scaling Factor	Female Scaling Factor	Male Scaling Factor	Female Scaling Factor
Pre-retirement	Pub-2010 Employee Mortality Table (for Teachers)	101%	97%	99%	100%
Post-retirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for Teachers)	99%	105%	96%	103%
Post-retirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees)	112%	110%	122%	106%

Following is summary of the recommended mortality assumptions for members classified as an employee type of non-academic:

Non-Academic (non-Police) Applicable Group	Base Table Mortality Table	Current Assumptions		Proposed Assumptions	
		Male Scaling Factor	Female Scaling Factor	Male Scaling Factor	Female Scaling Factor
Pre-retirement	Pub-2010 Employee Mortality Table (for General Employees)	114%	105%	120%	104%
Post-retirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	99%	107%	102%	104%
Post-retirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees)	112%	110%	122%	106%

Future mortality improvements are reflected by projecting the base mortality tables from 2010 using the MP-2020 projection scale under the current assumptions and MP-2021 projection scale under the recommended assumptions.

Mortality Assumptions

Following is summary of the recommended mortality assumptions for members classified as an employee type of police:

Non-Academic (Police) Applicable Group	Current/Proposed Base Table Mortality Table	Current Assumptions		Proposed Assumptions	
		Male Scaling Factor	Female Scaling Factor	Male Scaling Factor	Female Scaling Factor
Pre-retirement	Current: Pub-2010 Employee Mortality Table (for General Employees) Proposed: Pub-2010 Employee Mortality Table (for Safety Employees)	114%	105%	100%	100%
Post-retirement (non-disabled)	Current: Pub-2010 Healthy Retiree Mortality Table (for General Employees) Proposed: Pub-2010 Healthy Retiree Mortality Table (for Safety Employees)	99%	107%	100%	100%
Post-retirement (disabled)	Current: Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees) Proposed: Pub-2010 Disabled Retiree Mortality Table (for Safety Employees)	112%	110%	100%	100%

Future mortality improvements are reflected by projecting the base mortality tables from 2010 using the MP-2020 projection scale under the current assumptions and MP-2021 projection scale under the recommended assumptions.

The following tables and graphs contain the mortality experience for the experience study period:

Plan Election Percentage

Historically, members have been able to elect to participate in one of the two defined benefit plans, the Traditional Plan and the Portable Plan, or a defined contribution plan, the Retirement Savings Plan (RSP), which prior to September 1, 2020, was called the Self-Managed Plan (SMP).

Below is a summary of the election percentage for the RSP over the current and prior experience study period for all new members. The RSP election rate has been increasing since the implementation of Tier 2. In addition, the RSP election rate by payroll is higher than the RSP election rate by member count. This means that higher paid members are electing RSP in higher rates than lower paid members.

Fiscal Year End	RSP		RSP % of		RSP % of	
	Election	Total	Total	RSP Payroll	Total Payroll	Total
2011	576	4,999	12%	\$26,313,040	\$158,945,724	17%

2021-2023	2,090	14,282	15%	\$ 120,626,731	\$ 538,826,630	22%
2018-2023	4,482	27,826	16%	\$ 241,308,440	\$ 1,003,632,141	24%
Grand Total	6,234	34,208	18%	\$ 391,604,867	\$ 1,354,911,076	29%

Totals for 2018-2020 differ from prior page due to only including Tier 2 members. Certain members who are new actives may be eligible to participate in Tier 1.

We recommend using the following assumptions for plan elections, which are different for Academic and Non-Academic member classifications.

Plan Election Assumptions for Future New Hires				
	Current		Proposed	
	Academic	Non-Academic	Academic	Non-Academic
Retirement Savings Plan (RSP)	45%	25%	45%	25%
Tier 2 Plan	55%	75%	55%	75%

Other Valuation Assumptions

Money Purchase Factors

The money purchase factors, which apply by statute to Rule 2 benefit calculations, are to be updated each time there is a change in the investment return assumption or the post-retirement mortality assumption. The current money purchase factors are based on an investment return assumption of 6.50% and a mortality assumption based on the Pub-2010 Healthy Retiree Mortality Table (for Teachers).

Based on the recommendations in this experience study, GRS is recommending a change in the post-retirement mortality assumption to be first effective with the next valuation as of June 30, 2024. In the past when the factors have changed, the Board has adopted an effective date for implementation of the new money purchase factors. These factors will apply only to members hired before July 1, 2005, who are eligible for the money purchase benefit formula.

Following is the language from the Illinois Pension Code regarding actuarial assumptions used for benefit administration, including the calculation of money purchase factors.

(40 ILCS 5/15-124) (from Ch. 108 1/2, par. 15-124)

Sec. 15-124. Actuarial tables.

"Actuarial tables": Such tabular listings of assumed rates of decrement such as death, disability, retirement and withdrawal from service, according to age and sex, including mathematical functions derived from the rates of probability, combined with an interest discount factor, as are adopted by the board based upon the experience of the system.

For actuarial valuation purposes, GRS is recommending separate mortality rates for members for Academic and non-Academic employment types. However, for purposes of money purchase factors and other administrative purposes, we would recommend a combined mortality assumption that applies to all SURS members. The table below summarizes the separate assumptions recommended for actuarial valuation purposes and the combined mortality assumption recommended for administrative purposes. The money purchase factors are based on a unisex blend of 45% of the male rates and 55% of the female rates. There are other reasonable methods that could be used for a single mortality assumption for the money purchase factors other than the assumption shown in the table below, such as calculating separate money purchase factors based on Academic mortality and Non-Academic mortality and then blending the separate sets of money purchase factors.

Post-retirement (non-disabled) for Applicable Group	Base Table Mortality Table	Male Scaling Factor	Female Scaling Factor
Academic	Pub-2010 Healthy Retiree Mortality Table (for Teachers)	96%	103%
Non-Academic	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	102%	104%
Combined Academic and Non-Academic	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	90%	95%

Future mortality improvements are reflected by projecting the base mortality tables from 2010 using the MP-2021 projection scale.

Other Valuation Assumptions

Following is a graph illustrating the impact of the change in a member's benefit as a result to the change in the money purchase factors based on the proposed assumptions.

The money purchase benefit is calculated such that the money purchase balance is sufficient to pay benefits for the assumed lifetime of the retiree based on assumed future investment earnings.

Following is a table summarizing the money purchase benefit under the current factors and the factors using the proposed assumptions. In addition, the table shows the benefit under each set of factors if the member continued working for one additional year and retired with a higher money purchase balance. Although a member may have a lower benefit under the updated money purchase factors, a member would still accrue a higher benefit by working one additional year compared to retiring immediately before the change in the money purchase factors.

Immediate Monthly Benefit			Monthly Benefit 1 Year Later			Inc in Monthly Benefit 1 Year	
Age	Current	Proposed	Age	Current	Proposed	Current to Current	Current to Proposed
55	\$1,211	\$1,215	56	\$1,382	\$1,386	\$171	\$175
60	\$1,288	\$1,289	61	\$1,475	\$1,476	\$187	\$188
65	\$1,399	\$1,395	66	\$1,611	\$1,606	\$212	\$207
70	\$1,568	\$1,554	71	\$1,820	\$1,801	\$252	\$232
75	\$1,834	\$1,797	76	\$2,149	\$2,100	\$315	\$266

In addition, a member eligible for the money purchase formula will receive the greater of the money purchase formula benefit and the general formula benefit. Therefore, not all money purchase eligible members will be affected and the impact for a member may be less than the example shown above. The proposed annuity factors are based on member ages in the year 2027. Because the proposed mortality assumption is a generational mortality table, each cohort of retirees based on birth year would

Other Valuation Assumptions

have a slightly different factor. In order to have one set of factors that will apply until the next experience study, we have calculated factors based on the mid-point of the expected timeframe in which the factors are expected to be effective.

Following is an age and service schedule for active members from the actuarial valuation as of June 30, 2023, who are eligible for benefits under the money purchase formula. Approximately 7,500 to 8,500 members are eligible to retire immediately under early or normal retirement eligibility conditions and the money purchase formula.

Other Valuation Assumptions

Load on Liabilities for Service Retirees with Non-finalized Benefits

Prior to 2013, there had been liability losses for recent retired members due to finalized benefits that were higher than the preliminary estimates. Therefore, an additional 10% load on the estimated benefits had been assumed. Beginning with the 2013 actuarial valuation, SURS provided additional data for members whose benefits had not been finalized to help improve the liability measurement. A “best formula” benefit was provided which was higher than the benefits which had originally been provided. In the 2014 valuation, the losses generated for these members were significantly reduced.

Beginning with the June 30, 2015, actuarial valuation, the assumption was changed to the following:

- (1) A load of 10% on liabilities is assumed for service retirees whose benefits have not been finalized as of the valuation date and a “best formula” benefit **was not** provided in the data by Staff
 - (a) The assumption accounts for finalized benefits are on average about 10% higher than 100% of the preliminary estimated benefit
- (2) A load of 5% on liabilities is assumed for service retirees whose benefits have not been finalized as of the valuation date and a “best formula” benefit **was** provided in the data by Staff
 - (a) The assumption accounts for finalized benefits are on average about 5% higher than the “best formula” benefit

On the following page is a comparison of the ratio of the finalized benefits to the estimated benefits based on the current assumptions and data from the 2022 and 2023 valuations. The ratio is calculated in accordance with the following example:

- (1) Best formula monthly benefit provided for 2022 actuarial valuation: \$4,000
- (2) Projected benefit in 2023: $\$4,000 \times 1.03$ (COLA increase) $\times 1.05$ (5% load) = \$4,326
- (3) Finalized benefit provided for the 2023 actuarial valuation: \$4,200
- (4) Ratio of the finalized benefit to the estimated benefit: $\$4,200 / \$4,326 - 1 = -3\%$

Following is the ratio of the total estimated to finalized benefits as of June 30, 2023 based on the current assumptions:

Total Finalized Benefits	\$4,031,841
Total Estimated Benefits	4,107,725
Ratio (Finalized to Estimated)	-1.8%

The current assumptions resulted in estimated benefits that were slightly higher than the finalized benefits and is a slightly conservative assumption. We recommend no changes to the current assumptions.

Other Valuation Assumptions

Increase in Pensionable Earnings Greater than 6% during the Final Average Compensation Period (6% Employer Billing Contributions)

Under Section 15-155(g) of the Illinois Compiled Statutes, a participant's employer is required to fund the value of increases in pensionable earnings greater than 6% that would be used in the determination of the final rate of earnings. No additional assumption is currently being made for earnings used in the calculation of the final rate of earnings.

Following is a history of the contributions received from employers due to this provision and the amount as a percentage of projected payroll (from the actuarial valuation used to determine the applicable fiscal year statutory contribution):

\$ in Millions				
Fiscal Year	Number of Participants	Amount from Employers	Projected Payroll	Amount as % of Payroll
2014	226	\$1.9	\$4,274.0	0.04%
2015	357	2.5	4,435.6	0.06%
2016	336	2.2	4,499.7	0.05%
2017	379	3.1	4,610.0	0.07%
2018	290	2.4	4,587.7	0.05%
2019	318	2.4	4,593.5	0.05%
2020	241	2.3	4,551.0	0.05%
2021	331	3.2	4,667.2	0.07%
2022	546	4.5	4,893.0	0.09%
2023	488	4.4	4,994.3	0.09%
Average	351	2.9	4,610.6	0.06%

Based on SURS experience, the proposed salary increase assumption is 5.00% for Academic and 5.25% for Non-Academic (4.25/4.50% for age 50 and older Academic/Non-Academic) grading down to an ultimate assumed rate of increase of 3.50% (3.15% for age 50 and older) for members with 10 or more years of service. Therefore, the actuarial valuation does not assume that members will receive pay increases in excess of 6.00% during the period used for the final rate of earnings. To the extent that members do receive increases in excess of 6.00% during the period used for the final rate of earnings, there will be a liability loss that will be partially offset by the employer contributions required by statute.

Due to the relatively small amount of contributions that are received to this provision, we recommend that no assumption be made for either the contributions received or the liability losses generated by members receiving pay increases in excess of 6.00% during the final average earnings period. In addition, we expect that the pay cap under Tier 2 will result in a decrease in the 6% employer billing contributions as a percentage of payroll in the future.

Other Valuation Assumptions

Buyout Election Assumptions

Under Public Act (PA) 100-0587, the State Universities Retirement System of Illinois (“SURS”) shall offer an accelerated pension benefit payment to eligible members beginning on the implementation date and until June 30, 2021. (Public Act 101-0010 extended the buyout period from June 30, 2021, through June 30, 2024 and Public Act 102-718 extended the buyout period from June 30, 2024, through June 30, 2026 for both accelerated pension benefit options.) Assumptions are made and used in the actuarial valuations for these provisions.

There are two accelerated pension benefit payment options that are being offered: (1) for vested inactive members, a payment equal to 60% of the present value of the member’s pension benefit in lieu of receiving any pension benefit; and (2) for active Tier 1 members eligible for retirement, a payment equal to 70% of the difference between (i) the present value of the automatic annual increases (AAI) to a Tier 1 member's retirement annuity under the current AAI provisions and (ii) the present value of the automatic annual increases to the Tier 1 member's retirement annuity under revised AAI provisions.

The accelerated pension benefit payments are to be paid from the State Pension Obligation Acceleration Bond Fund after SURS submits vouchers for the payments to the State Comptroller. The funds do not come from SURS assets.

Following are the buyout statistics for the automatic annual increase (AAI) buyout and the vested inactive member buyout (VIB) from June 10, 2019 (when the buyout was first offered) through June 30, 2023, as provided by the Retirement System and supported the rationale for using the 0% assumption in the actuarial valuation as of June 30, 2023.

Buyout Activity from Inception Through 6/30/2023

	<u>AAI</u>	<u>VIB</u>	<u>Total</u>
Number Eligible for the buyout*	11,209	23,669	34,878
Buyout applications received	422	151	573
Buyout election forms sent	283	124	407
Buyout election forms approved	180	91	271
Application %	3.8%	0.6%	1.6%
Approved %	1.6%	0.4%	0.8%
Approved buyout amount**	\$17.0	\$24.4	\$41.3
Estimated Approved buyout (non EBA)	17.0	16.0	32.9
Estimated Liability Reduction	24.2	26.6	50.8

* Number eligible for the VIB buyout is the number of vested Tier 1 inactive members included in the actuarial valuation as of June 30, 2019 who are in the Traditional or Portable Plan. Number eligible for the AAI buyout is the number of total Tier 1 retirement claims (as provided by SURS).

** Includes amounts attributable to benefits that would have been payable from the Excess Benefit Arrangement (EBA). There was one \$11.2 million VIB buyout of which \$8.4 million was payable from the EBA during the year ended 6/30/2021.

The current buyout election assumption of 0% is a reasonable and modestly conservative assumption. Use of a slightly higher assumption over the remaining life of the program, while still reasonable, would lead to a reduction in the State contribution prior to the liability reduction actually occurring. We think SURS would

Other Valuation Assumptions

be better served by recognizing the liability reduction after it occurs rather than before. Therefore, we recommend maintaining the buyout election assumption of 0%. This means that the savings from the buyout program will be recognized each year as they occur – a common approach for this type of program.

SECTION III

COST IMPACT OF RECOMMENDED CHANGES

Cost Impact of Recommended Changes

The impact of adopting the recommended assumptions is summarized in the table below and on the following pages. The recommended assumptions increase the actuarial liability and decrease the funded ratio.

	Dollars in Millions			
	Actuarial Valuation as of 6/30/2023	Proposed Assumptions	Total Change	% Increase (Decrease)
Actuarial Accrued Liability

The financial impact is illustrated based on a projection from the June 30, 2023, actuarial valuation which determines the fiscal year 2025 statutory contribution. The assumption changes are expected to first be effective with the June 30, 2024, actuarial valuation and will therefore first affect the fiscal year 2026 statutory contribution.

*Under the statutory funding policy, the contribution rate impact from assumption changes is to be recognized over a five-year period.

SECTION IV

RECOMMENDED ACTUARIAL ASSUMPTIONS

Recommended Actuarial Assumptions

Rate of Investment Return. For all purposes under SURS, the rate of investment return is assumed to be 6.50% per annum beginning with the June 30, 2021, actuarial valuation. This assumption is net of investment expenses.

Price Inflation (Increase in Consumer Price Index "CPI"). The assumed rate is 2.40% per annum, beginning with the June 30, 2024, actuarial valuation.

Effective Rate of Interest. The assumed rate credited to member accounts is 7.00% per annum, beginning with the June 30, 2024, actuarial valuation.

Cost of living adjustment "COLA." The assumed rate is 3.00% per annum for members hired before January 1, 2011, based on the benefit provision of 3.00% annual compound increases. The assumed rate is 1.20% for members hired on or after January 1, 2011, based on the benefit provision of increases equal to ½ of the increase in CPI with a maximum increase of 3.00%, beginning with the June 30, 2024, actuarial valuation.

Annual Compensation Increases. Each member's compensation is assumed to increase by 3.15% each year, 2.40% reflecting salary inflation and 0.75% reflecting standard of living increases. That rate is increased for members with less than 34 years of service to reflect merit, longevity and promotion increases. The rates are based on service at the beginning of the year and are as follows:

Service Year	Total Increase - Academic		Total Increase - Non-Academic	
	Under Age 50	50 and Older	Under Age 50	50 and Older
0-1	15.00%	13.00%	12.00%	11.00%
2	9.00%	9.25%	9.00%	8.25%
3	7.75%	7.50%	8.00%	7.00%
4	6.75%	6.75%	7.00%	6.00%
5	6.25%	6.25%	6.50%	5.50%
6	6.00%	5.75%	6.25%	5.25%
7	5.50%	5.25%	5.75%	4.75%
8-10	5.00%	4.25%	5.25%	4.50%
11-14	4.75%	3.75%	5.00%	4.00%
15-18	4.50%	3.50%	4.75%	3.75%
19	4.50%	3.25%	4.50%	3.50%
20-24	4.25%	3.25%	4.25%	3.50%
25-29	4.00%	3.25%	4.00%	3.50%
30-33	3.75%	3.25%	3.75%	3.50%
34+	3.50%	3.15%	3.50%	3.15%

General Wage Inflation. The assumed rate of general wage inflation is 3.15%.

Recommended Actuarial Assumptions

Mortality. The mortality assumptions are as follows:

Members classified as an employee type of academic:

Academic Applicable Group	Base Table Mortality Table	Male Scaling Factor	Female Scaling Factor
Preretirement	Pub-2010 Employee Mortality Table (for Teachers)	99%	100%
Postretirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for Teachers)	96%	103%
Postretirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees)	122%	106%

Members classified as an employee type of non-academic:

Non-Academic Applicable Group	Base Table Mortality Table	Male Scaling Factor	Female Scaling Factor
Preretirement	Pub-2010 Employee Mortality Table (for General Employees)	120%	104%
Postretirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for General Employees)	102%	104%
Postretirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Non-Safety Employees)	122%	106%

Members classified as an employee type of police:

Non-Academic Applicable Group	Base Table Mortality Table	Male Scaling Factor	Female Scaling Factor
Preretirement	Pub-2010 Employee Mortality Table (for Safety Employees)	100%	100%
Postretirement (non-disabled)	Pub-2010 Healthy Retiree Mortality Table (for Safety Employees)	100%	100%
Postretirement (disabled)	Pub-2010 Disabled Retiree Mortality Table (for Safety Employees)	100%	100%

Future mortality improvements are reflected by projecting the base mortality tables from 2010 using the MP-2021 projection scale.

Recommended Actuarial Assumptions

Following are the future life expectancies for postretirement (non-disabled) mortality:

Age	Future Life Expectancy (years) in 2023				Future Life Expectancy (years) in 2030			
	Academic		Non Academic		Academic		Non Academic	
	Male	Female	Male	Female	Male	Female	Male	Female
35	53.87	55.56	50.93	53.86	54.40	56.03	51.59	54.42
40	48.62	50.30	45.67	48.56	49.15	50.78	46.32	49.12
45	43.39	45.06	40.44	43.28	43.92	45.54	41.07	43.84
50	38.19	39.83	35.34	38.11	38.71	40.31	35.95	38.66
55	33.07	34.69	30.46	33.14	33.58	35.17	31.05	33.68
60	28.09	29.74	25.75	28.28	28.59	30.20	26.31	28.80
65	23.31	24.91	21.26	23.57	23.77	25.34	21.77	24.03
70	18.76	20.23	17.01	19.06	19.16	20.60	17.44	19.46
75	14.53	15.78	13.10	14.83	14.86	16.12	13.44	15.17

Age	Future Life Expectancy (years) in 2023		Future Life Expectancy (years) in 2030	
	Police		Police	
	Male	Female	Male	Female
35	53.52	55.80	54.06	56.27
40	48.28	50.54	48.81	51.02
45	43.05	45.30	43.58	45.78
50	37.85	40.07	38.37	40.55
55	32.73	34.93	33.24	35.41
60	27.77	29.97	28.27	30.43
65	23.00	25.13	23.46	25.56
70	18.47	20.44	18.87	20.81
75	14.26	15.98	14.59	16.31

Recommended Actuarial Assumptions

Disability.

Disability rates apply during the retirement eligibility period. Members are assumed to first receive disability benefits (DB) and then receive disability retirement annuity (DRA) benefits.

For police officers, 50% of disabilities are assumed to occur in the line of duty and 50% of disabilities are assumed to be ordinary.

Recommended Actuarial Assumptions

Retirement. Upon eligibility, active members are assumed to retire as follows:

Nearest Age @ Retirement	Tier 1					Tier 2				
	Normal (Unreduced) Retirement			Early (Reduced) Retirement		Normal (Unreduced) Retirement			Early (Reduced) Retirement	
	Police	Academic	Non-Academic	Academic	Non-Academic	Police	Academic	Non-Academic	Academic	Non-Academic
Under 50		55.0%	55.0%							
50	50.0%	55.0%	40.0%							
51	40.0%	40.0%	30.0%							
52	40.0%	40.0%	30.0%							
53	40.0%	30.0%	30.0%							
54	40.0%	30.0%	30.0%							
55	50.0%	20.0%	25.0%	4.0%	8.5%					
56	30.0%	18.0%	25.0%	3.0%	5.5%					
57	30.0%	18.0%	25.0%	4.0%	6.0%					
58	30.0%	18.0%	25.0%	4.0%	6.0%					
59	30.0%	18.0%	25.0%	4.0%	8.0%					
60	20.0%	12.0%	20.0%			60.0%				
61	15.0%	12.0%	15.0%			25.0%				
62	15.0%	12.0%	17.0%			25.0%			15.0%	20.0%
63	15.0%	13.0%	17.0%			25.0%			10.0%	12.0%
64	15.0%	13.0%	17.0%			25.0%			10.0%	12.0%
65	40.0%	17.0%	25.0%			15.0%			10.0%	12.0%
66	40.0%	17.0%	25.0%			15.0%			10.0%	12.0%
67	40.0%	17.0%	25.0%			15.0%	30.0%	30.0%		
68	40.0%	17.0%	25.0%			25.0%	17.0%	25.0%		
69	40.0%	17.0%	25.0%			25.0%	17.0%	25.0%		
70	100.0%	17.0%	22.0%			100.0%	17.0%	22.0%		
71-79	100.0%	17.0%	22.0%				17.0%	22.0%		
80+	100.0%	100.0%	100.0%				100.0%	100.0%		

Members who retire are assumed to elect the most valuable option on a present value basis – refund of contributions (or portable lump sum retirement, if applicable) or a retirement annuity.

For purposes of the projections in the actuarial valuation, members of the Retirement Savings Plan are assumed to retire in accordance with the Tier 1 and Tier 2 retirement rates (based on hire date).

Recommended Actuarial Assumptions

General Turnover. A table of termination rates based on experience in the 2020-2023 period. The assumption is a table of turnover rates by years of service. A sample of these rates follows:

<u>Years of Service</u>	<u>Academic</u>	<u>Non-Academic</u>
0	15.00%	14.00%
1	15.00%	14.00%

A termination rate of 100% is assumed at three years of service for members classified as part time for valuation purposes.

Members who terminate with at least five years of service (10 years of service for Tier 2 members) are assumed to elect the most valuable option on a present value basis – refund of contributions or a deferred benefit.

Termination rate for 29 years of service used for Tier 2 members until retirement eligibility is met.

Recommended Actuarial Assumptions

Load on Liabilities for Service Retirees With Non-finalized Benefits. A load of 10% on liabilities for service retirees whose benefits have not been finalized as of the valuation date is assumed to account for finalized benefits that on average are 10% higher than 100% of the preliminary estimated benefit. A load of 5% is used if a “best formula” benefit was provided in the data by Staff.

Governor’s Pay. The governor’s pay is \$190,700 as of June 30, 2023, and budgeted as \$216,000 for fiscal year ending June 30, 2024, and is expected to increase each year by the assumed rate of increase in the Tier 2 pay cap (1/2 the increase in CPI or 1.20%).

Buyout Election Assumption. 0% of eligible Tier 1 active members are assumed to elect to receive a reduced and delayed AAI benefit at retirement and an accelerated pension benefit option in accordance with Public Acts 100-0587 and 101-0010. 0% of eligible inactive members are assumed to elect to receive an accelerated pension benefit option in lieu of an annuity at retirement in accordance with Public Acts 100-0587 and 101-0010.

 Re: Actuarial Experience Study Report – June 30, 2020 through June 30, 2023

At the June 6, 2024, Administration Committee meeting, Gabriel Roeder Smith & Company (GRS) will present the results of the experience study for the period of June 30, 2020 through June 30, 2023. An actuarial experience study is required every three years by statute (40 ILCS 5/15-173) and includes an analysis of the economic and demographic actuarial assumptions.

GRS is recommending the following economic assumption changes:

- The Price Inflation assumption be increased from 2.25% to 2.40%.
- The Investment Return assumption remain the same at 6.50%.
- The assumed future Effective Rate of Interest (for valuation purposes) be increased from 6.50% to 7.00%.
- The Base Salary Increase/Payroll Growth Rate be increased from 3.00% to 3.15%.
- The COLA for Tier 2 be increased from 1.125% to 1.20%.
- Modifying the overall assumed salary increase rates to separate Academic and Non-Academic and maintaining service-based rates that differ by whether an employee is over/under the age of 50.

GRS is recommending the following demographic assumption changes:

- Mortality Rates:
 - For Academic members, assume an increase in life expectancies for male and female retirees.
 - For Non-Academic members, assume a decrease in life expectancies for male retirees and an increase for female retirees.
 - Assume separate mortality rates for Police members based on the mortality table for public safety employees.
- Slightly lower turnover rates.
- Decrease disability rates for females (Academic and Non-Academic) and no change to male disability rates.
- Minor changes to retirement rates for Academic and Non-Academic.

Recommendations

- SURS staff recommend that the June 30, 2020 – June 30, 2023, actuarial experience study report be received as presented.

1901 Fox Drive, Champaign, IL 61820-7333
800-275-7877 • 217-378-8800 • (Fax) 217-378-9800
www.surs.org

- GRS and SURS staff recommend that the economic assumption changes be approved as presented:
 - The Price Inflation assumption be increased from 2.25% to 2.40% effective for the valuation period as of June 30, 2024.
 - The Investment Return assumption remains the same at 6.50%.
 - The assumed future Effective Rate of Interest (for valuation purposes) be increased from 6.50% to 7.00% effective for the valuation period as of June 30, 2024.
 - The Base Salary Increase/Payroll Growth Rate be increased from 3.00% to 3.15%, effective for the valuation period as of June 30, 2024.
 - The COLA for Tier 2 be increased from 1.125% to 1.20% effective for the valuation period as of June 30, 2024.

- GRS and SURS staff recommend that the demographic assumption changes be approved as presented and be effective for the valuation period as of June 30, 2024, and effective for the Money Purchase Factors (annuitization rate under Rule 2) and other actuarial tables no earlier than July 2, 2025.

 Re: Retirement Savings Plan Disability Study Report

Background

The Self-Managed Plan (SMP) was established in 1998 as a defined contribution plan, providing retirement, termination, and disability benefits. On September 1, 2020, SURS launched the redesigned SMP, renamed the SURS Retirement Savings Plan (RSP).

A participating RSP employee contributes 8.0% of their earnings and the non-participating or participating employer contributes at a rate of 7.60%. A portion of the 7.60% contribution is used to provide disability benefits for the RSP employees. Based on the Illinois Pension Code, Section 15-158.2(h), the disability contribution cannot exceed 1.0% of salary. At inception, the disability rate was set at 1.0%.

An actuarial disability study was conducted in 2008 which concluded that due to the experience and disability reserve accumulation, a reduction of the disability rate was warranted. Actuarial disability studies conducted in subsequent years found a similar trend and the disability rate was reduced in each of those years.

FY Ending June 30	Disability Contribution Rate
1999-2008	1.0%
2009-2012	0.5%
2013-2015	0.4%
2016-2018	0.3%
2019-2021	0.25%
2022 and after	0.00%

At the June 6, 2024, Administration Committee meeting, Gabriel Roeder Smith & Company (GRS) will present the results of the comprehensive review of the disability experience through June 30, 2023, of the participants of the Retirement Savings Plan. The purpose of the study is to review the actuarial methodology for valuing the disability benefits provided to RSP participants and to recommend changes as needed. A recommendation will be made to maintain the current RSP disability contribution rate of 0%.

1901 Fox Drive, Champaign, IL 61820-7333
800-275-7877 • 217-378-8800 • (Fax) 217-378-9800
www.surs.org

Recommendations

- SURS staff recommend that the June 30, 2024, Retirement Savings Plan Disability study report be received as presented.
- GRS and SURS staff recommend that we maintain the current Retirement Savings Plan disability contribution rate of 0%.

Re: Review of RSP Disability Experience

Dear Ms. Myers:

The results of the comprehensive review of the disability experience through June 30, 2023, of the participants of the Retirement Savings Plan ("RSP") sponsored by the State Universities Retirement System ("SURS") of Illinois are presented in this report. This is an update to the study dated March 2, 2021, that included experience through June 30, 2020.

This report was prepared at the request of Staff and the Board of SURS and is intended for use by SURS and those designated or approved by Staff or the Board. This report may be provided to other parties only in its entirety and only with the permission of Staff or the Board.

The purpose of the review is to review the methodology for valuing the disability benefits provided to RSP participants, and to recommend changes as needed.

The review of disability experience was based upon information furnished by SURS Staff, concerning financial transactions and data related to disability benefits provided to participants of the RSP. We checked for reasonableness, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by SURS Staff.

Background and Plan Description

The RSP (formerly the SMP), which was established in 1998, is a defined contribution plan ("DC") that, in addition to providing retirement and termination benefits based on the DC account balance, provides disability benefits. SURS members who were participating in the Traditional Plan prior to 1998 were given the option to transfer to the SMP upon inception. New members must elect a retirement plan within six months of employment.

Ms. Tara Myers
Chief Financial Officer
State Universities Retirement System
Page 2

Monthly disability benefits are provided by SURS and are based on the greater of:

- 50% of basic compensation on the date the disability occurred; or
- 50% of average earnings during the 24 months immediately preceding the disability.

Benefits are offset by employer paid insurance benefits and workers' compensation benefits. Disability benefits are provided to participants who satisfy the following eligibility requirements:

- Unable to perform the duties of assigned position for a period of more than 60 days; and
- Completed two years of service (unless disability is a result of an accident).

Disability benefits are paid until:

- Disability ceases; or
- September 1 following 70th birthday; or
- If disability commences after age 65, then benefits are paid for a five-year period; or
- Total benefits exceed 50% of employee's total earnings.

History of RSP Disability Contribution Rates

For members of the RSP, a separate fund has been established to provide disability benefits. Since the inception of the RSP through fiscal year 2008, the contribution rate to provide disability benefits to RSP members was set at the maximum of 1% of earnings. The 1% contribution rate was set prior to having credible disability experience, but with the anticipation that it would be a conservative assumption, and would also be a stable contribution rate for the first 10 years of the fund.

RSP disability and forfeiture assets are commingled with SURS defined benefit (DB) plan investments. These assets are allocated investment income/loss based upon the annual DB plan return, net of fees.

GRS recommended contribution rate decreases from the following reviews:

1. 2008 review (for experience from fiscal year 1999 through fiscal year 2007)
2. 2012 review (for experience through fiscal year 2011)
3. 2015 review (for experience through fiscal year 2014)
4. 2018 review (for experience through fiscal year 2017)
5. 2021 review (for experience through fiscal year 2020)

Ms. Tara Myers
 Chief Financial Officer
 State Universities Retirement System
 Page 3

Following is a summary of the RSP employer contribution rates since the inception of the RSP (shown separately for the portion to fund RSP disability benefits and the portion that funds members' RSP accounts):

Fiscal Year Ending June 30	RSP Disability Contribution Rate	RSP Contribution Rate to Member Accounts
1999-2008	1.00%	6.60%
2009-2012	0.50%	7.10%
2013-2015	0.40%	7.20%
2016-2018	0.30%	7.30%
2019-2021	0.25%	7.35%
2022 and after	0.00%	7.60%

Review of Experience

Exhibit I summarizes the annual RSP disability experience for FY 1999 through FY 2023. Over the 25-year history of the RSP plan, through June 30, 2023, there have been 499 incidences of disability. The incidence rate has varied from year to year and has been higher in certain years, particularly in fiscal years 2012 and 2015, in which the rate was around 0.30% and in fiscal year 2018 in which the rate was 0.27%.

The actual average incidence rate (the rate of disablement each year) over the 25-year period is approximately 0.21% per year. That means for every 10,000 members in the population, 21 would become disabled in that year. An average disability incidence rate of 0.21% for the RSP compares to the age 48 rate of about 0.12% for male non-academic employees and 0.14% for female non-academic employees recommended in the most recent experience study of the SURS defined benefit plan covering the period June 30, 2020 through June 30, 2023. The average age of full-time RSP active members in the actuarial valuation as of June 30, 2023, was about 48 years old. Following is a summary of the disability incidence rates over different periods of time (based on full-time RSP members) through June 30, 2023:

Fiscal Years	Disability Incidence Rates
2019-2023	0.22%
2014-2023	0.23%
2009-2023	0.23%
2004-2023	0.22%

The number of RSP members and the percentage of total RSP members receiving RSP disability benefits during the fiscal year has been increasing and is currently 0.82% of the total number of RSP full-time members. Although the number of members receiving RSP disability benefits has been increasing, there has not been a significant increase in the RSP benefit payments as a percentage of RSP payroll. In addition, the data still indicates that the disabilities are mainly short term in nature (with an average actual duration of receiving benefits of less than two years) and as there are new disability recipients, former disability recipients are ceasing benefits.

Ms. Tara Myers
Chief Financial Officer
State Universities Retirement System
Page 4

Duration of the Disability Payments

Exhibit II summarizes information on the duration of disability payments made to RSP participants for FY 2008 through FY 2023. We have reviewed the average duration that members receive disability benefits for:

1. Members that are no longer receiving disability payments, and therefore the period for which they received benefits is known; and
2. Members that are still receiving disability benefits, and therefore the actual period for which they will receive benefits is not yet known.

For disabilities which occurred during fiscal years 2008 through 2020 (for which a majority of the disability benefit payments have ceased and the actual duration of disability benefit payments is known), members whose period of receiving disability benefits has ended received benefits for an average of about two years, compared with an average maximum duration of about five years. This means that most disabilities cease before members reach the maximum age or the benefit limitation that is based on total SURS earnings. The average duration of disability payments by fiscal year and in total is shown in Exhibit II.

Exhibit III has a distribution of disability incidences from fiscal year 2008 through 2023 by age at disablement and duration of disability payments and Exhibit IV has a distribution of disability incidences from fiscal year 2008 through 2023 by service at disablement and duration of disability payments.

RSP Disability Account Balance

The current contribution for the RSP disability benefit is 0% of payroll. As shown in Exhibit V, the current account balance for the RSP disability reserve is approximately \$150 million and annual benefits were about \$2.5 million for fiscal year 2023. The current RSP disability reserve is sufficient to pay about 60 years of payments based on the level of benefits paid in fiscal year 2023 (\$2.5 million) and no future contributions or investment income. Based on a previous legal opinion, the RSP disability reserve balance may only be reduced through RSP disability benefit payments. Therefore, it is reasonable to maintain the RSP disability contribution rate of 0%.

RSP Membership Data

Exhibits VI and VII summarize the membership statistics of active members in the RSP.

Summary and Conclusion

In summary, the RSP disability plan has experienced favorable actuarial experience, and based upon that favorable experience and the current disability account reserve, is in a position to maintain a 0% contribution rate. The findings in this report are based on data and experience through June 30, 2023. Future experience may differ significantly from past experience presented in this report.
